Appendix D - Eastbourne Green Network Schedule ............................................ 84
1 Introduction

1.1 This document is the Infrastructure Delivery Plan (IDP) for Eastbourne Borough Council (EBC) which began its preparation in early 2010. It is a supporting document for the Borough’s Local Plan which incorporates the Eastbourne Core Strategy Local Plan (which covers the planning period from 2006 to 2027), the Eastbourne Town Centre Local Plan (TCLP) and the Employment Land Local Plan.

1.2 The Council’s Sustainable Community Strategy¹ (Pride of Place), and Local Development Documents, must be supported by evidence of the physical, social and environmental infrastructure needed to enable future growth and development to take place. The key strategic objectives of the Local Plan relating to the provision of infrastructure, identified in the Core Strategy are:

**Key Spatial Objective 6: Community Health**

“To promote and enhance healthy lifestyles by assisting the development of affordable housing, cultural, recreational, sporting facilities as well as community and health care provision, and ensuring adequate infrastructure provision.”

**Key Spatial Objective 10: Sustainable Neighbourhoods**

“To ensure that the diverse needs of local communities are delivered, having regard to the sustainability and capacity of each neighbourhood, the infrastructure needed and the opportunities to meet requirements.”

Several of the TCLP objectives also relate to the delivery of supporting social and physical infrastructure.

1.3 The IDP also feeds into the Homes and Communities Agency (HCA) Infrastructure Plan for East Sussex, an integral part of the HCA ‘Single Conversation’, which prioritises the key pieces of strategic infrastructure required across the County.

1.4 The provision of necessary infrastructure alongside new housing and employment development is required to create and maintain sustainable communities. Maintaining and enhancing sustainable communities and neighbourhoods are at the heart of the Council’s Local Plan and the Government’s localism agenda. Additional physical infrastructure in the form of utility services, transport, schools, open space, community, health and leisure services is necessary to support the expanding local population, create balanced growth, and provide for those who visit or work in the Borough.

¹ East Sussex Integrated Sustainable Community Strategy (Pride of Place), 2007
1.5 This IDP identifies the infrastructure provisions that are required in Eastbourne; when they are needed; the lead agencies responsible for their provision; and how they will be funded. The identified infrastructure provisions are also prioritised in relation to the delivery of the Council’s spatial development strategy set out in the Core Strategy. Whilst this IDP draws on the investment plans of EBC and other infrastructure providers over the plan period, it is also intended to influence and assist with co-coordinating public and private investment decisions by providing a comprehensive summary of infrastructure requirements and proposals across the Borough. At the same time, existing infrastructure shortfalls have been identified and will be addressed by policies in the Core Strategy. Working closely with the Eastbourne Strategic Partnership (ESP) and other local authorities across East Sussex, the Council has been able to effectively consult and liaise with infrastructure providers to collate capital spending programmes and key information required for the IDP.

1.6 Whilst the IDP has initially been produced from current information, it is a ‘dynamic’ and evolving document, which will be periodically reviewed to ensure it reflects changing circumstances and new information. The recent changes in government will affect public sector funding streams and service delivery and the IDP will need to be reviewed regularly in light of these changes. The ongoing support of the ESP, key stakeholders and infrastructure partners will be essential in ensuring this is achieved.

1.7 Some infrastructure improvements across the Borough will be provided and / or funded by individual developments through planning obligations (Section 106 agreements). Also, the Council has implemented its Community Infrastructure Levy (CIL) to assist in raising funds for infrastructure required to support development. The Council adopted its CIL Charging Schedule in April 2015.

1.8 The IDP supports Policy E1: Infrastructure Delivery of the adopted Eastbourne Core Strategy Local Plan, which states that the Council is committed to introducing a CIL. In line with the latest CIL regulations, a CIL will enable funding to be raised from viable built development to fund infrastructure required to support development across the whole Borough.

2 Executive Summary

2.1 The IDP for Eastbourne has been prepared by working closely with infrastructure providers, stakeholders and partners to ensure that key issues and accurate information are presented. It has been prepared following the processes outlined in section 6 of this report. Continued close working with all stakeholders will be essential to ensure that any changing circumstances to infrastructure partner’s spending programmes will be addressed in future reviews of the IDP.
Infrastructure Priorities

2.2 The Infrastructure Delivery Schedule (provided in Section 12 of this report) identifies how important each element of infrastructure provision is to support the level of growth identified in the Eastbourne Core Strategy Local Plan. Certain pieces of infrastructure have been assessed as critical and these are key Council priorities to be delivered to ensure the Council’s spatial development strategy is not compromised. Transport and education infrastructure have been identified as critical infrastructure, along with waste water treatment, flood protection measures and the provision of a community facility at Sovereign Harbour (to ensure Sovereign Harbour becomes a sustainable centre). The evolution of the IDP allows for changing infrastructure priorities to be addressed. These priorities will be monitored against overall housing delivery and other development growth within the Borough.

2.3 Whilst the IDP identifies a number of infrastructure issues which have the potential to impede future development in the Borough, it goes on to identify interventions which will enable the infrastructure required to support growth to be provided in a timely manner. Importantly, the IDP also highlights a number of issues which will require the Council to continue close dialogue with the relevant infrastructure providers, such as the potential need for future expansion of the Eastbourne Wastewater Treatment Works with Southern Water and the continuation of the Willingdon Levels Catchment Area Flood Storage Contribution Scheme with the Environment Agency.

2.4 The following sections of this IDP comprise a comprehensive account of the future needs of all different types of infrastructure, culminating with an Infrastructure Delivery Schedule presented in section 12 of this report.

3 Objectives and Outcomes

3.1 The key objectives of the IDP are to:

- Support the preparation and delivery of the Borough’s Local Plan and future development policies, within the context of the Sustainable Community Strategy’s Borough Vision;
- To prepare a delivery document, consistent with spatial planning and strategic priorities, setting out infrastructure requirements across the Borough to 2027 within 5 year timescales for the periods: 2016 – 2020 (short term), 2021 – 2025 (medium term), and 2026 and later (long term);
• Prepare a schedule which will confirm: location, project name/description, the reason for the infrastructure requirement, lead agency, other agencies involved, cost, phasing, sources of funding, and scheme dependencies.

3.2 The principal aim of the project is to create a central source of knowledge on public services infrastructure based upon a common evidence base which will allow a cross-service understanding of future infrastructure requirements.

3.3 The key outcomes of the IDP will be:

• A Delivery Plan to help support and underpin the implementation of the Borough’s Core Strategy and TCLP;
• To facilitate continuing joint working on infrastructure with other agencies and Councils in East Sussex as well as the Eastbourne Strategic Partnership (ESP). This will help bring efficiencies to external organisations as well as the Council;
• To inform meetings with key agencies and major landowners such as the Homes & Communities Agency - Single Conversation;
• Through its monitoring and update the IDP will assist the attainment of development monitoring targets and local performance indicators;
• To establish an on-going corporate process to record and update capital programmes and investment by the Council and within Eastbourne;
• To provide a key element of the corporate evidence data base; and
• To produce an effective basis for development and service planning.

4 Policy Context

4.1 The Government’s policy on infrastructure planning is set out in the National Planning Policy Framework (NPPF), which highlights the importance of infrastructure planning to underpin the preparation of Local Plans. The NPPF provides the following key planning policy directions which have been addressed in this IDP:

• Local plans should be positively prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable and consistent with achieving sustainable development (Para. 182);
• Local planning authorities should work with other authorities and providers to: assess the quality and capacity of infrastructure for transport, water supply, wastewater and its treatment, energy (including heat), telecommunications, utilities, waste, health, social care, education, flood risk, and coastal change management, and its ability to meet forecast demands;
and take account of the need for strategic infrastructure including nationally important infrastructure within their areas (Para. 162);

- In delivering sustainable development, priority areas for economic regeneration, infrastructure provision and environmental enhancement should be identified (Para. 21);
- It is important to ensure there is a reasonable prospect that planned infrastructure is deliverable in a timely fashion (Para. 177);
- Local authorities should work collaboratively and consider producing joint planning policies on strategic matters and informal strategies such as joint infrastructure and investment plans (Para. 179);
- There should be evidence of having effectively cooperated to plan for cross-boundary impacts of the plan. Cooperation should be a continuous process of engagement, resulting in the provision of land and infrastructure necessary to support current and projected future levels of development (Para. 181);
- Local authorities should work with neighbouring authorities and transport providers to develop strategies for the provision of viable infrastructure necessary to support sustainable development (Para. 31);
- Local plans should support the expansion of electronic communications networks, including telecommunications and high speed broadband (Para. 43); and
- Local authorities should plan positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure (Para. 114).

4.2 The structure and approach taken in the preparation of the IDP reflects the requirements set out in NPPF. The Council has also followed, where possible, guidance prepared by the Planning Advisory Service on ‘The Steps Approach to Infrastructure Planning and Delivery’ and other best practice guidance.

4.3 The Council adopted its CIL Charging Schedule in April 2015, which are governed by the Community Infrastructure Levy Regulations (2010) as amended. CIL has replaced the Section 106 system as the main way to fund infrastructure, although Section 106 agreements still remain available to provide for site specific issues that cannot be dealt with through planning conditions, i.e. local labour contributions and affordable housing.

5 What Types of Infrastructure does the IDP cover?

5.1 The Council is involved in delivering a variety of infrastructure to support future housing and employment growth, ranging from large detailed transport schemes, to smaller public realm improvements. The types of infrastructure that will be presented in the IDP can be divided into three categories as outlined in Figure 1 below:
**Figure 1: Types of Infrastructure**

<table>
<thead>
<tr>
<th>Infrastructure Category</th>
<th>Type of Infrastructure*</th>
</tr>
</thead>
</table>
| **Community Infrastructure** – Facilities and services needed to support all sectors of the community and forms development. | • A – Education  
• B – Community Facilities  
• C – Health Care Facilities  
• H – Emergency Services  
• I – Affordable Housing |
| **Functionally Essential Infrastructure** – The provision of utilities, transport and flood protection facilities, including links to related assets serving Wealden District. | • D – Utilities, Waste and Flood Measures  
• F – Transport  
• G – Town Centre Infrastructure Improvements # |
| **Green Infrastructure** – Maintaining and enhancing the network of green spaces and biodiversity across the Borough including links to similar assets in Wealden District. | • E – Open Space and Green Infrastructure |

* These types of infrastructure are discussed in detail in Section 9: Infrastructure Requirements  
# The Town Centre Infrastructure type bridges all three infrastructure categories.

### 6 The Process of Preparing the IDP

6.1 The Council’s Sustainable Community Strategy (prepared by the ESP) and Core Strategy visions are key starting points in the consideration of infrastructure planning. With help from the ESP, the Council prepared a list of key contacts from all public agencies and infrastructure providers that operate in the Borough.

6.2 Running alongside the preparation of the IDP, the Council has prepared a Sustainable Neighbourhood Assessment (SNA), which includes an assessment of the provision and accessibility of community facilities and services in each of the Borough’s 14 neighbourhoods. This has helped to identify any shortfalls in provision based on local standards for accessibility to services and facilities. This has provided a useful starting point for the IDP, and helped to address local infrastructure issues. The SNA underwent public consultation from 2 November 2009 – 25 January 2010, giving the local community an opportunity to comment on the emerging findings. Further opportunity to comment on the findings of the SNA was provided during the consultation on the Eastbourne Plan – Proposed Core Strategy from 17 December 2010 – 12 March 2011. The SNA is published.
alongside the Core Strategy as a background evidence document. It will be revisited as part of the Council’s review of its Local plan in 2016/2017.

6.3 An infrastructure questionnaire was compiled and sent to the key contacts from public agencies and infrastructure providers in March 2010 and again in January 2016 in order to obtain key information in support of the IDP. Key questions included:

- How general standards were applied to calculate infrastructure requirements;
- What capital spending programmes had been identified or would be required over the planning period; and
- Whether there were any opportunities for co-location with other services.

6.4 The questionnaire ensured that the information was collected and presented in a consistent manner so that it could be used effectively. In addition to the questionnaires, the Council held meetings with other public organisations, such as East Sussex County Council, to discuss in detail the Council’s requirements.

6.5 The information provided by other partner organisations has helped the Council to identify how current deficiencies in the provision of social and physical infrastructure could be addressed. It also helped to identify the threshold levels in terms of the level of population or number of housing units that would trigger a specific infrastructure requirement. This is essential for the Council to calculate the provision of new infrastructure required to support the projected supply of new housing and employment growth in each of the Borough’s fourteen neighbourhoods (identified in the Core Strategy), divided into 5 year time periods up to 2027.

6.6 Figure 2 sets out the key steps that the Council has taken in the preparation of the IDP. The receipt of key information through the Infrastructure questionnaires and further confirmation on specific issues with infrastructure providers has enabled the Council to prepare a detailed infrastructure schedule for the IDP.

Eastbourne IDP [Seventh Update] February 2016
A draft version of the IDP underwent consultation with key stakeholders for a six week period between 13 July – 24 August 2010. The Council received detailed feedback from a number of stakeholders and infrastructure providers at this stage and comments were taken into account in the production of this report. Further consultation on the IDP occurred during consultation on the ‘Eastbourne Plan – Proposed Core Strategy’ for a twelve week period between 17 December 2010 and 12 March 2011. Comments received from stakeholders at this stage were used to inform revisions to this report. Further comments were made on the IDP in the form of representations during the 12 week representation period for the ‘Proposed Submission Version of the Core Strategy’ (16th September - 9th
December 2011). The Core Strategy was submitted to the Secretary of State on 31 January 2012 with an accompanying IDP.

6.8 The IDP has since been revised to provide up-to-date information on infrastructure costing and funding, and this latest version will assist in the preparation of the Council’s Employment Land Local Plan. This IDP has been prepared in consultation with stakeholders and infrastructure providers during early 2016.

7 Report Structure

7.1 The IDP starts by considering the local context, explaining anticipated levels of housing, employment and population growth, together with highlighting the current shortfalls in infrastructure provision identified in the Sustainable Neighbourhood Assessment (SNA). The IDP generally takes a neighbourhood approach to infrastructure delivery, considering specific local issues and the provision of facilities and services in each of the Borough’s fourteen distinct neighbourhoods. In some cases it is appropriate to take a more holistic approach, reflecting the nature of different types of social infrastructure and their catchments; therefore some infrastructure provision will be planned for at a Borough level.

7.2 The remainder of the report discusses individual elements of infrastructure provision in broad terms, highlighting those that are critical to the delivery of the Core Strategy and development opportunity sites within the Town Centre. Cross-boundary issues relating to the delivery of infrastructure in Eastbourne and South Wealden are also discussed in the IDP. The report concludes with discussions on the resource implications for the Council.

7.3 The final section of the IDP presents the Infrastructure Delivery Schedule, highlighting key pieces of infrastructure required to deliver the Local Plan over the lifetime of the plan. The Infrastructure Delivery Schedule template has been agreed by all local authorities in East Sussex and details the following information:

- The Service and Issue;
- Output – the location, nature and brief description of the scheme;
- Justification (Policy and Evidence of Need) – Core Strategy objectives and related policies and supporting evidence studies;
- Lead Body – main delivery agency plus any supportive partnerships;
- Cost – estimated cost of delivering the whole scheme;
- Funding Arrangements – Anticipated sources, levels of funding and projected funding streams;
• Development in Local Plan which depends on output – The amount or areas of development that result in the need for the infrastructure;
• Scheme Status – Whether the scheme is a concept, proposal or detailed scheme;
• Timeframe for delivery of output – When the infrastructure is going to be delivered, to be identified in 5 year tranches: short term 2014-2018, medium term 2019-2023, and long term 2024+;
• Importance to Strategy – How critical is the scheme to the delivery of the spatial development strategy and strategic development sites;
• Risk to Delivery of Output – The degree of risk that the infrastructure will not be delivered;
• Alternatives and/or other mitigations - consequences of delay and alternative strategies if infrastructure is not delivered.

8 Local Context

Population and Housing Growth

8.1 The Council was required, under the South East Plan to deliver 4,800 new homes over the 20 year period from 2006 to 2026. The Council has extended its planning period to 2027, to ensure it has a 15 year plan from the adoption date of the Core Strategy. As such an additional 222 units are required for the year 2027, which matches the Council’s annual housing target from April 2010 to meet the previous South East Plan target. The overall housing target now becomes 5,022 units for the 21 year period (2006-2027).

8.2 As of 31 March 2015, the Council has delivered 2,160 new dwellings, and has a residual housing requirement of 2,862 net units to be delivered before 2027. The Council’s proposed spatial development strategy outlines that future residential development will be concentrated on brownfield sites and a number of small greenfield sites within the built up area boundary. The creation of two sustainable centres within the Sovereign and Town Centre neighbourhoods will enable housing-led balanced growth, delivering the infrastructure that is required to support new development in a planned and managed way. In the Council’s most sustainable neighbourhoods residential development will be increased to the highest levels typically found in the neighbourhood. There will be a windfall allowance of approximately 110 net units during the last eleven years of the plan period from 2016/2017. Evidence that windfall development will come forward within the plan period has been provided as supporting documentation to the Core Strategy.

8.3 It is critical to forecast how population levels are likely to change across the Borough as a result of planned new development to meet the local housing
target and how this differs across each of the Borough’s fourteen neighbourhoods. Figure 3 shows the existing and forecast population levels to 2027 for each neighbourhood. Eastbourne’s population is projected to increase to 99,650 by 2027. The population calculations help the Council to identify what the standards for infrastructure provision will be over the plan period based on the level of population increase and total population by 2027.

8.4 Projected population levels by neighbourhood in 2027 have been calculated using East Sussex County Council’s Policy based population projections (a proxy using a base date at 2026 has been used). The projections take account of birth and death rates, migration levels, and projected levels of housing growth across the Borough. Although population projections are only available at a Borough wide level, the Council is able to project the population level in each of the Borough’s neighbourhoods. As shown in Figure 3 below, this is achieved by apportioning the Borough wide population figure of 99,650 as according to the projected numbers of dwelling units.

Figure 3 – The Intensity of Residential Development and Forecast of Population Change in the Borough’s 14 neighbourhoods up to 2027

**Employment Land Requirements**

8.5 The Employment Land Review forecasts the need for additional employment floorspace up to 2031. It is based on the key sectors within the Borough forming the basis of future growth that leads the Borough out of the recession, and increases in employment participation rates as economic activity rates and the working age population grows. This forecast would create an additional 1,263 jobs within the class-B uses up to 2031.

8.6 The job creation forecast is translated into additional floorspace requirements using employment density assumptions. The following densities assumptions have been used:

- B1a/b – 12 sqm per employee
- B1c/B2 – 36 sqm per employee
- B8 – 70 sqm per employee

8.7 In order to ensure that the employment forecasts are based on more than economic growth ‘predictions’, additional allowances have been made for expected losses of B space to other uses, and to allow ‘churn’ to take place, which allows spaces for businesses to move to other sites.
8.8 In addition to the requirement, a contingency reserve of floorspace should be added to ensure that, should sites not come forward for redevelopment, there will still be an appropriate supply and mix of sites to meet needs. This is known as ‘Headroom’. The Employment Land Review recommends a 6% headroom capacity for Industrial and Warehouse uses, and a 10% headroom capacity for Office uses. This would equate to approximately **43,000 sqm** of additional class-B use space over the plan period to 2027.

8.9 The employment land requirement is proposed to be met through intensifying development in existing employment locations and directing development toward the Sustainable Centres at Town Centre and Sovereign Harbour that have been identified in the Eastbourne Core Strategy Local Plan 2006-2027, as follows:

- 20,000 sqm of B1c, B2 and B8 space within existing Industrial Estates (Neighbourhood 6, 7 and 13)
- 3,000 sqm of B1a space within the Town Centre (Neighbourhood 1)
- 20,000 sqm of B1 space at Sovereign Harbour (Neighbourhood 14)

8.10 In addition to ‘B Space’ Employment requirements there is the potential for following sites to contribute towards the provision of new employment land across the Borough (with their relevant use class):

- Neighbourhood 1 – Town Centre Development Opportunity Sites (Retail A1 – A5 Use Classes);
- Neighbourhood 8 – Langney Shopping Centre Extension, (A1 and D2 Use Class);
- Neighbourhood 14 – Sovereign Harbour Retail Park (A1 Use Class).

8.11 Each individual development for additional employment land will have its own infrastructure requirements and these will be addressed under each section of the IDP.
**Shortfall Analysis**

8.12 A critical role of the IDP is to address the existing shortfalls in infrastructure provision in the essence of creating and maintaining sustainable communities. The Council’s Sustainable Neighbourhood Assessment (SNA) has set local accessibility standards for a number of facilities/services and types of social infrastructure, calculating the percentage of each neighbourhood which is within walking distance of a given facility. Figure 5 presents the findings of the calculations, identifying where improvements are required in the provision of the particular piece of social infrastructure for each neighbourhood. It should be noted that the outcomes of the SNA are a starting point for the assessment of infrastructure provision in the IDP. The future level of housing, population and employment growth across the Borough and in each neighbourhood is the key determinant in the overall level of infrastructure provision required.

8.13 Key messages from the shortfall analysis, evidenced in the SNA are:

- The need to improve the provision of social infrastructure in the Sovereign Harbour Neighbourhood, particularly local facilities such as a community centre, open space and children’s play space provision;
- The inadequate supply of Children’s play areas in the Town Centre, Upperton Meads and Ratton neighbourhoods;
- The inadequate supply of general facilities in the Ratton neighbourhood and dependency on the car for such facilities as a GP surgery and newsagents; and
- The provision of playing fields and sporting facilities should be considered at a Borough wide scale as their catchments cover larger areas than neighbourhoods.

8.14 The following section of the IDP explains in detail the existing shortfalls for each individual type of infrastructure, the local standards that have been set and the future requirements to cater for the proposed level of housing and economic growth.

8.15 The Council is currently reviewing its employment land requirements and is in the process of preparing an Employment Land Local Plan, which will be adopted by the end of 2014. Future revisions to the IDP will take account of evidence prepared for this Local Plan.

**Sustainable Centres**

8.16 The spatial development strategy identifies the Town Centre and Sovereign Harbour neighbourhoods as sustainable centres, highlighting that significant
social and physical infrastructure improvements are required in support of the creation of sustainable communities and future growth. The role of the IDP is to manage any specific infrastructure issues or demands that need to be addressed or enhanced in the two neighbourhoods to ensure housing and employment growth is sustainable.

Key - **Red**: Poor Access to service, significant improvement required  **Yellow**: Limited access to service which could be improved
9 Infrastructure Requirements

9.1 The following section of the IDP details the specific types of infrastructure that are required to deliver the Core Strategy Local Plan and the Town Centre Local Plan, discussing the individual requirements and issues for each individual piece of infrastructure.

A. Education

9.2 East Sussex County Council, as the Local Authority, has a statutory duty to ensure there are sufficient, high quality education places in the county to meet present and future demand across all phases of education. The County Council's Education Commissioning Plan 2015-2019\(^5\) contains information on:

- The current pattern of Early Years, primary and secondary school and post-16 provision across the county
- Forecasts of Early Years, primary, secondary and post-16 numbers in future years by borough and district
- The County Council's policy for school organisation in the county

9.3 The key areas of pressure, as identified in the Education Commissioning Plan, are summarised as follows.

A1 - Early Years and Childcare

9.4 With the addition of early years provision at The Cavendish School from the 2016/17 academic year (see primary places below) there should be sufficient early years provision across the district to meet the predicted demand for places in the future.

A2 - Primary School Provision

9.5 Reception year shortfalls are forecast until 2018/19, after which the current downturn in births should lead to a surplus of places developing across the town.

9.6 Construction is underway on the Cavendish School site to provide new facilities for 420 primary aged children and 38 FTE (full time equivalent) nursery places for 2-4 year olds. Completion is expected in the 2016/17 academic year.

A3 - Secondary School Provision

\(^5\) https://new.eastsussex.gov.uk/educationandlearning/management/download
9.7 The County Council is not forecasting a shortage of Year 7 places until around 2020/21. Beyond this, as a result of numbers coming through primary schools in Eastbourne and the surrounding area and taking account of the impact of additional housing development in Eastbourne and south Wealden additional secondary school capacity is likely to be required.

9.8 The County Council has begun working with secondary schools in the area to explore potential options for delivering additional capacity in the future.

**A4 - Further Education Provision (for 16-19 year olds)**

9.9 The County Council is currently forecasting that the existing capacity of places at Sussex Downs College’s Eastbourne campus should be sufficient to meet the demand for places.

9.10 In the medium term, the County Council anticipates that around 130 additional workplaces could be required at Plumpton College to meet the demand arising from 16-19 year old students who are East Sussex residents.

**B. Community Facilities**

**B1 - Library Service**

9.11 East Sussex County Council is responsible for providing library and information services. Across the Borough, local residents, visitors and employees access a wide variety of services via a network of static libraries, mobile libraries and a County Council mobile office as part of a county-wide library service.

9.12 The library and information service constantly monitors and reviews the service offer to ensure that libraries are at the heart of the community, being the first point of contact and offering a wide range of public services. Population growth and demographic changes impact on the resources needed to deliver a community focused service which is targeted to reflect the need of the local population.

9.13 Libraries within the Eastbourne Borough area are

- Eastbourne Central Library (Neighbourhood 1) – this large library is well located near the railway station and on bus routes. This busy library has undergone significant building works over the last 3 years with all public areas being refurbished to enable the delivery of a modern library and information service.

- Hampden Park Library (Neighbourhood 7) – The library is reasonably well located relative to shops, community facilities and the railway station.
• Langney Library (Neighbourhood 8) – The library is very well used and is located in a busy shopping centre, but its accommodation is cramped.

9.14 The mobile library provides services across the Borough. Mobile library schedules are constantly reviewed to take account of changing customer needs.

**B2 – Community Centres**

9.15 For the purposes of the Core Strategy a community centre is defined as a venue or meeting place that can be used or hired out by the public for community meetings and events. In order to ensure that the community has local accessibility to community facilities, walking distances have been set in the Council’s Sustainable Neighbourhoods Assessment (SNA). The Council proposes a target standard for the maximum time that a resident should walk to access a community centre of 10 minutes, equivalent to a walking distance of 800m.

9.16 Applying the walking distance standard to each community centre and mapping accessibility by neighbourhood, shows that the neighbourhoods of Ocklynge & Rodmill (5), Ratton (12), and Sovereign (14) currently have poor access to community facilities. This coupled with the intensity of housing growth identified in the Council’s spatial development strategy (of which Ocklynge/Rodmill and Sovereign neighbourhoods have higher levels of housing growth) show that the provision of new community facilities in these neighbourhoods should be prioritised.

9.17 In order to deliver the spatial development strategy of ‘Sustainable Centres’ the delivery of a community centre at Sovereign Harbour is required, providing the existing local population with a facility for community events, and to cater for future population growth in the neighbourhood. Opportunities to increase the availability of community space in both Ratton and Ocklynge/Rodmill neighbourhoods, along with other neighbourhoods with high levels of housing growth will be explored through the dual use of existing facilities, for instance existing school, sports, health facilities and churches. The Core Strategy ‘Communities, Sports and Health’ policy identifies that all new community facilities should be capable of providing a floorspace extension of 50% in order to cater for increased community need in future years.

9.18 An outline planning application has been submitted (planning ref: 131002), which includes the proposal to provide a development of up to 800 sq. m. of D1 (Leisure Use) within area known as Site 5, Sovereign Harbour. It is the intention that this site will be developed for a community centre, and a further full planning application in 2014 or early 2015 will confirm this.
9.19 Eastbourne Borough Council together with its partners will seek opportunities to secure ‘gap’ funding in order to deliver the community centre required. The facility must be built as a priority in the phasing of the overall development of the Harbour and should therefore be provided prior to commencement of development on any of the remaining residential development sites.

9.20 The Langney Community Centre in Etchingham Road has now been reopened, which provides a valuable local facility for Langney residents. The Council has carried out essential works to the centre in partnership with Eastbourne Homes to bring the main hall and kitchen back into use. The East Sussex Strategic Partnership is consulting local residents on how they would like the Centre to be used in the future and on its design.

**B3 - Local Services**

9.21 The provision of local services in each of the Borough’s neighbourhoods, including facilities such as newsagents, post offices and convenience stores, is essential in order to support sustainable living. Being able to walk to and access a local service and facility for convenience shopping and day to day activities is of critical importance to promote sustainable communities and quality of life.

9.22 To support the delivery of ‘Sustainable Centres’ an increase in provision of local services is required in the Sovereign neighbourhood. The Sovereign Harbour Supplementary Planning Document highlights the order of priority for delivering infrastructure within the Sovereign Harbour neighbourhood.

**B4 – Adult Social Care**

9.23 East Sussex County Council Adult Social Care works with other agencies to provide a range of personal and community services to help meet the care and support requirements of individuals who need help to live in the community or need to live in a residential setting. A key strategic driver is the development of a range of housing options for older people and people with a range of disabilities to enable these people to live in the community rather than in residential care. A range of housing options is being developed across the county in conjunction with Boroughs and Districts and Registered Providers (RP’s). In Eastbourne this is focused on the following:

- Extra care housing
- Supported housing for people with mental health needs
- Supported housing for people with physical disabilities
These priorities are identified in the County Council’s Asset Management Plan.

C. Health Care Facilities

9.24 Health and well-being plays an important part in a sustainable community and this can be improved through the provision of local and accessible health care facilities and through encouraging healthier lifestyles. Alongside the District General Hospital there are 13 GP surgeries and 22 dentists in the town. It is important that communities have local access to health facilities, although the patient’s choice of GP practice is often based on many factors.

9.25 The Government’s Health and Social Care Bill, introduced on 19 January 2011, proposed changes to the way in which health services are commissioned, delivered and assessed. To implement these changes, activities that are taking place in East Sussex include:

- Setting up an East Sussex Health and Wellbeing Board to coordinate the planning and commissioning of health and care services;
- Developing local GP Commissioning Consortia to commission health services in their local area;
- Transferring responsibility for Public Health from the Primary Care Trusts to East Sussex County Council. For the purposes of this IDP the information prepared relates to data provided by the PCT, therefore the PCT is still the main reference.

C1 - GP Surgeries

9.26 The broad framework for the provision of health care facilities was restructured through the Health and Social Care Act 2012. Clinical Commissioning Groups (CCGs) are NHS organisations set up by the Act to organise the delivery of NHS services in England. CCGs are clinically led groups that include all of the GP groups within the local geographical area, with the aim of giving GPs the power to influence commission decisions for their patients.

9.27 There is a pressing local need to replace poor and inefficient buildings and facilities in which GPs are providing services. It has been identified that 3 of the 11 GP surgeries in the Borough are of poor quality and require extensive modernisation or redevelopment. A number of the buildings also do not meet the size standards for GP premises. The assessment of quality of surgeries is kept under continual review by the local CCG and it has been identified that as a priority alternative locations and increased floorspace are required for two existing surgeries:
• Lighthouse Medical Practice, College Road, Town Centre (Neighbourhood 1); and
• Green Street Clinic, Green Street, Old Town (Neighbourhood 4).

9.28 The modernisation of Bolton Road practice is also required in the longer term to ensure the facility meets physical condition standards. A new medical facility within Sovereign Harbour has now been completed which serves the neighbourhood and its surrounding area, and assists in the objective of creating a ‘Sustainable Centre’ at Sovereign Harbour. A strategy for delivering further facilities in the medium to long term (post-2016) across the Borough is currently being considered.

C2 - Dentists

9.29 There are 22 existing dental surgeries located in the Borough, 8 of which are accepting new NHS patients. The provision of dentist surgeries is spread evenly across the town, with a good or excellent level of accessibility in each of the Borough’s neighbourhoods, as identified in the Sustainable Neighbourhood Assessment. There is no requirement for strategic infrastructure investment in dental surgeries in the short term as increased local population levels can be catered for in the existing surgeries.

C3 - Pharmacies

9.30 The Council’s Sustainable Neighbourhood Assessment considered access to pharmacy facilities in each of the Borough’s neighbourhoods. There is an identified poor provision of a pharmacy in the Ratton neighbourhood, although there are facilities nearby in adjoining neighbourhoods and just outside the Borough in Willingdon/Polegate. Ratton is allocated very low levels of housing growth in the future; therefore it is not a strategic priority to deliver a facility in this location.

C4 – Hospital Services

9.31 Eastbourne’s District General Hospital (DGH) serves the Borough and its surrounding areas of South Wealden and is run by the East Sussex Hospitals NHS Trust. The hospital provides a comprehensive range of acute surgery and medicine, for all ages with 24 hour emergency departments. This includes:

• Coronary Care Unit (CCU)
• Chaplaincy Centre
• Cancer Care Centre
• Day Hospital for the Elderly
• Day Surgery
• Diagnostic Laboratories and services
• Dietetics and Special Therapy Services
• Emergency Department
• Endoscopy Suite
• High Dependency Unit
• Hydrotherapy Pool
• Intensive Care Unit (ICU)
• Midwifery-led Maternity Unit
• Early Pregnancy Unit
• Medical Assessment Unit
• Medical and Elderly Unit
• Occupational and Physiotherapy Services
• Operating Theatres
• Outpatients Departments
• Private Patients Unit
• Radiology – MRI and CT Suites
• Short Stay Paediatric Assessment Unit
• Urology Investigation Suite
• Wards - Medical and Surgical

9.32 The East Sussex Hospitals NHS Trust has prepared its Development Strategy for both the Eastbourne DGH and Conquest Hospital in Hastings which has resulted in several services transferring to the Conquest Hospital in Hastings. The Eastbourne DGH will continually need to expand to cater for population growth in Eastbourne and the South Wealden area. The Trust has already identified areas for expansion and submitted two planning applications for redevelopment and extension of parts of the DGH. These were approved in 2011 and now complete.

9.33 The Trust are undertaking a major series of ward and departmental reconfigurations in order to meet current standards of care and treatment, which has led, after much consideration of options, to a location for increasing floorspace on the Greensward adjacent to the Day Surgery Unit, which also resulted in the relocation of the helipad. The extension houses a new endoscopy unit for both inpatients and outpatients. The size of the unit and the rooms within it are governed by NHS legislation. It also provides a single reception point for the new unit, the existing day surgery unit and an MRI facility. The parking area at the front of the existing unit has been remodelled to create extra parking bays (including disabled parking bays) and a pick-up and drop-off zone.

9.34 Further expansion opportunities within the Eastbourne DGH will be identified in the Trust’s Development and Estates Strategy prioritised within the next 5 years and subsequent revision of the IDP will take account of the outcomes of this report.
D. Utilities, Waste and Flood Measures

D1/D2 - Electricity & Gas Supplies

9.35 The national grid has a statutory duty to develop and maintain an efficient and coordinated transmission system of electricity and gas supply across the country. It owns and maintains the network, providing electricity supply to local distribution companies.

9.36 The National Grid is responsible for producing a National Electricity Transmission System (NETS) Seven Year Statement (SYS). It is published by National Grid Electricity Transmission plc (NGET), acting in its role as National Electricity Transmission System Operator (NETSO). National Grid Electricity Transmission plc is a member of the National Grid plc ("National Grid") group of companies. The SYS was published in 2010 and covers the period up to 2016/2017.

9.37 The SYS outlines that total annual electricity requirements are projected to fall in 2010/2011 but then gradually increase to 2014/2015. Increasing end-user demand is offset by expected growth in existing generation, rather than creating effective new generation. As a result, no extra growth in transmission electricity demand is expected over the period 2009/10 to 2015/16. Eastbourne is located in the Central South Coast zone and the SYS has indicated that there will be a low level of electricity generation and demand in the region up to 2016/2017. This is highlighted in figure 9:

Figure 9 - Central South Coast Zone Electricity Generation and Demand

<table>
<thead>
<tr>
<th></th>

<td>4170</td>
<td>4140</td>
<td>4127</td>
<td>4110</td>
<td>4116</td>
<td>4103</td>
</tr>
</tbody>
</table>

9.38 The Central South Coast covers a coastal area stretching from Southampton in the west to Hastings in the east and is connected to the adjacent zones by five double circuit 400kV lines. Over the SYS period there is very little change in generation and demand within this zone other than the oil fuelled generation at Fawley, Hampshire dropping out of favour. The opportunity for new generation development can be regarded as medium; however, reinforcement of the local transmission infrastructure could be required in order for new generation to be accepted.

9.39 UK Power Networks is a company that provides electricity to customers in Eastbourne. The Electricity Supply Regulator, OFGEM, agree a 5 year plan for UK
Power Networks to follow including capital spending and standards of performance. These are constantly under review. The UK Power Network in Eastbourne is of a high quality and new networks required through new development will be provided at this standard.

9.40 In terms of the supply of gas, the National Transmission System (NTS) is the high pressure part of National Grid’s transmission system and it consists of more than 6,600 km of top quality welded steel pipeline operating at high pressures. The gas is pushed through the system using 26 strategically placed compressor stations. From over 140 off-take points, the NTS supplies gas to 40 power stations, a small number of large industrial consumers and the twelve Local Distribution Zones (LDZs) that contain pipes operating at lower pressure which eventually supply the consumer.

9.41 Scotia Gas Networks are responsible for managing and maintaining gas supplies to Eastbourne which is contained within South East LDZ. Although there are currently no specific capacity issues in Eastbourne, each new development will require to be assessed both individually and also cumulatively along with any other developments in the area and, where necessary, reinforcement of the gas system (change in pipe size) may be required. Although there are currently plans to reinforce gas supplies to Eastbourne in 2014, this is constantly under review and these plans may be either advanced or deferred depending on system performance and load growth over the period.

9.42 Scotia Gas Networks also have an ongoing mains replacement programme to renew older gas mains every year and part of this programme is likely to involve significant investment within Eastbourne Borough.

**D3 - Broadband Connection**

9.43 The broadband connection service in Eastbourne has been deregulated, and there are several principal operators providing a broadband service from the Eastbourne exchange. These are: AOL, 02, C&W/Bulldog, Orange, Sky/Easynet, TalkTalk, and Tiscali. The exchange serves 26,750 residential premises and 2,052 non-residential premises.

9.44 Broadband connectivity to cable and wireless connections is not available across the whole of the Borough, although there are pockets, especially in the Town Centre where wireless connection is available. Improvements are being prioritised to improve the level of connectivity, ensuring that existing and future areas for business and residential premises have adequate access to broadband connections, especially within the Sustainable Centres. This project has gained momentum and Eastbourne Borough Council has installed wireless technology to
its main Council office to allow local businesses to use the fast wireless broadband service.

**D4 - Water**

9.45 Southern Water, responsible for sewerage and waste water treatment, identify that the Eastbourne Wastewater Treatment Works (WTW) are currently operating at near capacity and that additional capacity will be required to meet the combined level of growth and demand of new homes in Eastbourne and South Wealden by 2027. The Eastbourne WTW has Environment Agency consent for its future capacity to cater for the proposed level of residential growth up to 2027. This will ensure that treated wastewater discharged into the sea continues to be of high quality, and to not cause water pollution. To increase the capacity of the WTW, an extension of the underground box to accommodate a new plant may be required, depending on the hardware that would need to be accommodated. Wastewater treatment capacity is an essential infrastructure requirement, and a priority for the Council to cater for future growth in Eastbourne.

9.46 A high level of housing development is proposed in South Wealden, just outside the Council’s boundary. Southern Water has undertaken a feasibility to investigate the provision of wastewater treatment capacity in this area. The preferred solution is to improve the quality of the treated effluent from both Hailsham Wastewater Treatment Works, whilst maintaining the existing water levels to the Pevensey Levels, without the need to create further additional headroom at the Eastbourne WTW.

9.47 Southern Water is required to bid for funding to deliver additional wastewater treatment capacity to serve new development identified in adopted development plan documents. The proposal would be subject to scrutiny and approval by Ofwat. The Ofwat ‘Periodic Price Review’ is the process by which Southern Water reviews investment needs over 5 year periods and submits its business plans to Ofwat for funding.

9.48 In terms of individual developments, the principle is that new development should connect to the nearest point of adequate capacity within the sewage network. Local infrastructure to deliver this must be funded by the development. This ensures that the infrastructure is paid for by those who directly benefit from it, rather than by existing customers who would otherwise have to pay through increased general charges. Ofwat reviews company business plans and sets prices for customers in a ‘Final Determination’. Southern Water charges customers through water and sewerage bills to fund investment and business operation.

9.49 Investment to deliver additional wastewater treatment capacity to meet the level of new development proposed in the Council’s spatial development strategy will be
promoted in parallel with the development via each Ofwat periodic review for
delivery in subsequent funding periods, e.g. 2015-2019, 2020-2024. Within the
next five years (2014-2018) Southern Water have identified the requirement to
fund and deliver a flood alleviation Scheme in Terminus Road, which is not directly
linked to new development proposed in the Borough.

9.50 South East Water is responsible for providing the Borough with a clean, safe
supply of drinking water. They are responsible for maintaining the Borough’s main
clean water networks, pumping stations, service reservoirs, treatment works,
boreholes and meters. South East Water are regulated by Ofwat, the Environment
Agency and the Drinking Water Inspectorate and they are required to maintain 25
year forward looking forecasts, plans and strategies under statutory requirements,
ensuring there is no deficit during the 25 year period. The document ‘South East
Water Future Plans 2010-2015’ identifies that the company is facing significant
challenges in the future driven by: growth in population, increased water use from
existing customers, an ageing infrastructure and a significant number of new
regulatory requirements.

9.51 South East Water’s investment programme for 2010-15 is £502m. The programme
has been built and developed around three key drivers. These are asset
maintenance, meeting the demand for water and meeting legal water quality
obligations. The capital programme for 2010-15 is considerably larger than the
programme for 2005-10 and drives an increase of 4.1% per annum on the average
bill. No major infrastructure improvements have been identified in the Borough in
the short term (next 5 years), but there will be continual network supply
improvements and customer metering programmes taking place across the
Borough throughout the plan period.

D5 – Waste

9.52 East Sussex County Council is the Waste Planning and Waste Disposal Authority for
the Borough, with the local authority being responsible for household and other
municipal waste collection. The Borough is jointly responsible with the County
Council for the recycling of household waste, but the County Council has direct
responsibility for the provision and management of household waste recycling
sites.

9.53 There is an ongoing need for new waste facilities to provide capacity to enable
diversion of commercial and industrial waste from landfill. The majority of
Eastbourne is identified as an area of search for such facilities in the East Sussex,
South Downs and Brighton & Hove Waste and Minerals Local Plan. Eastbourne is
identified in the Waste & Minerals Plan as an ‘urban’ authority producing waste.
There is an identified need to safeguard all waste management facilities in the
Borough and provide additional space to store materials for transfer to other sites. No applications are anticipated in the short term (within the next 5 years).

9.54 Roselands household waste site off St Philip's Avenue is to be maintained and has recently been reconfigured to better utilise waste transfer. Transport issues in terms of access and capacity have been addressed to ensure the continued provision of this facility up to the end of the planning period (2027) and beyond. The Council wishes to see the Roselands facility moved to an alternative location as the current site is not well located, being within a predominantly residential area with poor access. However, the County Council has so far been unable to find a replacement site.

D6 – Flood Measures

9.55 Parts of Eastbourne suffer from a high level of flood risk; this problem is particularly acute within Eastbourne Park which acts as a natural flood storage area. The Council’s Strategic Flood Risk Assessment (SFRA) [2010] outlines the local flood risk issues, mapping flood zones and hazards across the town. The Shoreline Management Plan sets out a policy of ‘hold the line’ which will protect Eastbourne’s developed coast to its existing level of defence. The Borough currently benefits from ongoing maintenance of the existing tidal flood defences and operation of the Beach Management Plan (BMP).

9.56 As part of their funding of flood defence schemes DEFRA invite applications for Flood Defence Grant in Aid. These are grants to fund capital works schemes which help to mitigate against flooding. Local Authorities can submit forward programmes, known as "Medium Term Plans", on an annual basis in June, to apply for funding to cover flood defence capital works. Eastbourne Borough Council submit applications every year for ongoing Beach Management Works that are in accordance with the BMP.

9.57 Eastbourne has been successful on the previous two rounds of applications, securing funding for the Beach Management Works and steps are currently being taken to ensure that we have a robust and well prepared application in place for the continuation of this work.

9.58 A business case for a 5 year beach management scheme was submitted to the Environment Agency National Review Group in June 2011 and technical approval of the scheme has been secured. The Environment Agency in 2012 funded a £4.5m coastal protection scheme to importing shingle to Eastbourne in order maintain the "Standard of Protection required.

9.59 The Pevensey Coastal Defences from Sovereign Harbour, through Pevensey Bay, to Cooden Beach are managed by a Public Private Partnership (PPP) which is
funded by DEFRA. Pevensey Coastal Defence Ltd (PCDL) was set up to manage and maintain these sea defences. PCDL is contracted and has funding to do this for 25 years. There are still 12 years left to run covering the period up to 2025.

9.60 Pevensey Coastal Defence Ltd is funded year on year to undertake its maintenance duties. They receive the money from the Environment Agency, which is assured by Central Government through DEFRA. They have authority to undertake works as and when they are required. The types of work that the PCDL undertake are:

- ongoing surveys to monitor the frontage and identify if and where any maintenance is needed;
- mend any weaknesses in the defences to maintain its integrity; and
- maintain the defences (should a storm for example) result in a need for urgent repair work.

9.16 The required flood defence work will be achieved through beach replenishment – recycling existing beach material through the process of dumping or pumping shingle from elsewhere onto an eroding shoreline to replenish or widen the existing beach. The Council does not propose any new flood defences using specific mineral resources such as clay or chalk.

9.62 The Environment Agency shows continued support for the Council’s Eastbourne Park Flood Storage Scheme which is designed to compensate for loss of flood storage and increased surface water run-off from the new development within, the Willingdon Levels drainage catchment area. Flooding contributions can sometimes be mitigated through Sustainable Drainage Systems (SuDS)

9.63 In order for the Eastbourne Park Flood Storage Scheme to remain effective, in addition to providing further infrastructure for the scheme, there is a need to review and update the operation and maintenance of the existing scheme infrastructure. East Sussex County Council was rewarded £175,000 by the Department for Environment, Food and Rural Affairs (DEFRA) to develop a Surface Water Management Plan (SWMP) for Eastbourne and the surrounding area. The SWMP project is now complete and an action plan for Eastbourne has been prepared. Its SWMP focus relates to the urban areas of Eastbourne and Willingdon/Polegate (which are outside the local authority in Wealden District Council), whilst looking beyond this area to determine the sources of flood risk. It will be the responsibility of the SWMP partners to take the necessary steps to take forward the action plan. Engineering solutions to ensure the delivery of the increased flood storage capacity will be confirmed later in 2014 and any unspent S106 contributions will be used to help fund future infrastructure requirements.

9.64 Flood storage should also be regarded as an opportunity to create green infrastructure and these areas should maximise recreational, nature conservation
and climate change adaptation opportunities. These opportunities will be addressed in the green infrastructure section.

9.65 The Environment Agency has commenced a project, in partnership with Natural England, to implement an effective control programme for the invasive plant, Floating Pennywort. This invasive species is affecting parts of the Pevensey Levels Site of Special Scientific Interest (SSSI) and is encroaching onto Eastbourne’s urban watercourses via the Langney Haven. The plant has potential to significantly impact on the flood capacity, control structures and ecology of the wetland heart of Eastbourne. The work undertaken by the Environment Agency will determine the best way to manage the plant within local ditch systems. It is therefore essential for the Council to implement a programme that ensures the pennywort does not spread into Eastbourne Park. This has been addressed in the management of Eastbourne’s Green Network which is discussed in the following section of this report.

E. Open Space and Green Infrastructure

9.66 Open spaces, including parks and gardens play an important role in enhancing the quality of life, health and well-being of the Borough’s residents. Good quality and accessible open space also adds to the character and quality of neighbourhoods and the Borough as a whole. Supporting the delivery of green infrastructure networks will ensure biodiversity can thrive and will enhance the environmental quality of the Borough.

9.67 The Council is currently preparing a Natural Resources Strategy, aimed at conserving and enhancing areas of open space and biodiversity, coupled with other initiatives such as reducing carbon emissions and promoting renewable forms of energy generation. The Natural Resources Strategy will ensure that the Council itself becomes a leading light in planning and adapting to Climate Change and safeguards the Borough’s environmental quality.

E1 - Open Space and Rights of Way

9.68 The Council’s Open Space Assessment and Sustainable Neighbourhood Assessment acknowledge that there is currently a good provision of accessible open space across the Borough especially for natural areas and Parks and Gardens. Sovereign has been identified as a neighbourhood in which the provision of a park/garden and more accessible open space would benefit the housing-led balanced growth with other community facilities, as part of the creation of Sustainable Centres.
9.69 In line with the recommendations of Natural England, we aim to achieve the following targets for access to green space, using their Accessible Natural Greenspace (ANGst) standards:

- All residents should live no more than 300m from their nearest area of natural green space of at least 2ha in size;
- That there should be at least one accessible 20ha site within 2km of home;
- That there should be one accessible 100ha site within 5km of home;
- That there should be one accessible 500ha site within 10km of home;
- Statutory Local Nature Reserves at a minimum level of one hectare per thousand population.

9.70 Providing for the needs of the Borough is not just a quantitative issue. Improving the quality of open spaces and opening up areas such as Eastbourne Park will enhance the quality of life and health of local residents. The maintenance of a good quality network of open spaces is also a key priority in the establishment of a Green Infrastructure Network, ensuring biodiversity can thrive.

9.71 In the first instance new developments should incorporate an adequate supply of open space on site, this includes informal amenity space along with formal open space and children’s play space for larger sites. This will be assessed on a site by site basis according to standards set in the Outdoor Playing Space Supplementary Planning Guidance (SPG).

9.72 East Sussex County Council is responsible for maintaining the rights of way network of paths, bridleways and byways. Measures required to remedy harmful impacts of new development on the rights of way network including country parks (which Eastbourne Borough Council has dual responsibility for) include:

- Development and maintenance of the footpath/bridleway network;
- Restoration and enhancement of the rights of way network by repairs or upgrading of paths, bridges, stiles, signage etc;
- Development of countryside management schemes including country parks;
- Improving local access to the countryside for all;
- Improving signage;
- Measures for the protection and management of woodland;
- Contributions for nature conservation and the management of the Council’s Sites of Nature Conservation Importance (SNCI).

9.73 The Local Transport Plan identified that the County Council will survey the condition of Eastbourne’s rights of way within the short term (next five years). The data collected from the surveys will help inform the development of a prioritised programme of management and maintenance work for the rights of way network.
**E2 - Children’s Playing Space**

9.74 Shortfall analysis in the Sustainable Neighbourhood Assessment indicated that there are very few children’s playground facilities in the Town Centre, Upperton and Meads neighbourhoods, which each have a high level of housing delivery allocated in the spatial development strategy. There are also current deficiencies in the Ratton and Sovereign neighbourhoods. These calculations are based on accessibility standards set out in the Open Space Assessment. For children’s play space a total of 0.1ha of play space should be provided per 1000 population.

9.75 Based on population projections to 2027\(^6\), an additional 4.5ha of children’s play space is required. As land is limited in the Borough the potential to maximise efficiency and use through the sharing of facilities is encouraged. Imaginative and flexible design of facilities will create spaces which have multi-functional uses, for instance a new children’s play space could be located on an unused part of a playing field.

9.76 New children’s play space facilities in the future (on the adoption date of the CIL Charging Schedule) will be delivered through CIL funding. The delivery of new children’s play space is prioritised in Sovereign neighbourhood in order to contribute towards the creation of a Sustainable Centre. This will be secure through a S106 agreement, before CIL is formally adopted.

**E3 - Playing Fields and Sports Pitches**

9.77 Facilities such as tennis courts, football pitches, and bowling greens all cater for the population of the whole town, and as such are scattered in various locations across Borough. A number of sporting facilities are generally grouped together on the same site. The requirement for changing facilities means that it is more efficient to provide sporting facilities in one location, rather than providing a facility that is accessible to each neighbourhood. It is therefore relevant to look at the requirements and demands for sporting facilities at a Borough level.

9.78 Based on population projections to 2027, an additional 10.3ha of outdoor sports pitches is required. This meets the local standard of 1.5ha of sports facilities per 1000 population. Currently there is a reliance on local schools to provide outdoor sports facilities as the existing facilities are fully used. This secondary role for schools will be important in ensuring the Council can address the shortfall in provision but relies on the effective management of schools opening up facilities outside of school hours. Placing or extending any reliance on secondary schools to provide such facilities would also be dependent on agreement being reached on the workings of any such arrangement and a number of important concerns,

---

\(^6\) 2026 figure used as a proxy for 2027.
notably over the safeguarding of children, being addressed satisfactorily. In addition, there are drainage problems with some existing facilities and measures to address this are required.

9.79 The provision of additional playing fields and sports pitches will be delivered partly (or wholly) through developer contributions collected through the Council’s CIL. The reason for this is Eastbourne’s limited number of large sites that will be result in the requirement for either on-site provision or large financial sums. It will therefore be difficult to collect through Section 106 agreements, once pooling restrictions apply.

**E4 - Allotments**

9.80 The maintenance, provision and enhancement of allotments are critical in order to support the delivery of green networks between areas of open space. Along with providing land to grow produce they also act as important areas of biodiversity and attract an abundance of wildlife. The Council recognises the importance of allotments and is implementing the requirements of the Allotment Provision Study (2009) to meet future demand for allotment space in the Borough.

9.81 The Allotment Provision Study showed an existing deficit in local allotment provision when compared to national standards. The deficit will increase up to 2026 with additional dwellings being built and demand heightening. The data that was originally produced in the report was based on trend based population projections. This has been updated in Figure 7 below to reflect East Sussex County Council’s Policy Based Population Projections. Figure 7 shows there is an overall requirement for 7.51ha of allotment land in the short to medium term (up to 2016) and a total of 7.64ha in the long term up to the end of the plan period (2027).

*Used as a proxy for 2027*
9.82 The Council identified that in order to meet current demand for new allotment provision the standard size of allotment plots should be reduced within the existing allotment sites. The Allotment Provision study indicated that existing allotment users and people on the waiting list only require a 5 rod (0.0125ha) size plot as opposed to the average size of 7.9 rods (approximately 0.02ha) plot that are typically found on allotment sites across the Borough. The reconfiguration of allotment sites would allow for extra plots to be provided and would meet the demand identified on existing waiting lists. It would also reduce the requirement to deliver an additional 7.64ha by the end of the planning period.

9.83 The Eastbourne Allotments and Gardens Society (EAGS) manage the Council’s allotments on behalf of the Council. EAGS in partnership with Eastbourne Borough Council have addressed the shortfall in allotment provision by letting plots that become available at 5 rods instead of the previous standard size of 10 rods. This approach has considerably increased the number of plots available over the last 4 years, with the total number of plots now standing at 1,052 (January 2014). EAGS are continuing to actively subdivide plots as they are being handed back, so plot numbers will continue to increase in future years.

9.84 An increase in plot numbers has also been achieved through bringing back to use areas within existing allotment sites, along with extending some of the sites. This has been achieved at the allotments sites of Churchdale Road, Manor Road and the largest group of sites (considered together as one) at Gorringe Road, Marchants Field, Summerdown Road and Tutts Barn Lane.

9.85 Further provision of allotment land is prioritised in the short term (within the next 5 years) at Churchdale Road Allotments. The ambition is to extend the allotment site to provide an additional 2.72ha of land. This would require considerable drainage work, fencing, roadways, car parking, cultivation and the installation of water to allow it to become suitable for allotments. The works would be at a cost of £50,000. The work would require planning permission and a wildlife mitigation survey has recently been completed in readiness for the planning application to be submitted in February 2014. Due to the high volume of reptiles identified on site through the preliminary ecological study, there will need to be a minimum of 90 days of capture and relocation of reptiles followed by 5 consecutive days of non-capture as evidence the population has been entirely relocated. Groundworks will not be able to commence until September 2014 for anticipated completion in October 2014.

9.86 There may also be further opportunities on larger residential development sites to integrate allotment land within the development, and this will be assessed on a site by site basis once planning applications are submitted. This has recently been achieved through the granting of planning permission at Kings Drive, Cross Levels Way, where allotment provision has been integrated into the scheme.
9.87 The Council identifies the need to enhance the quality of allotments specifically with regards to ancillary provision and to focus on areas of particular importance to users, specifically site infrastructure. It will ensure that any new provision will meet the minimum quality levels of water supply, safe and secure access, toilet facilities, well-maintained paths and roadways and adequate parking.

**E5 - Green Infrastructure and Eastbourne Park**

9.88 Eastbourne Park, also known as Eastbourne Marshes, is an identified Biodiversity Opportunity Area (BOA). Two other BOAs: the South Downs (Seaford to Eastbourne Downs) and the Pevensey Levels, also fall within the Borough boundary. The Environment Agency, in partnership with the Sussex Wildlife Trust and Sussex Biodiversity Partnership, has identified the need to improve and protect the value of Eastbourne Marshes, enhancing the green infrastructure associated with its habitats, making them more resilient to development pressures and climate change. The BOA designation provides further flood management benefits and wetland biodiversity for Eastbourne Park.

9.89 There is a specific Core Strategy Local Plan policy relating to Eastbourne Park, which relates to safeguarding and enhancing the environmental, landscape and biodiversity characteristics of the grazing wetland environment as well as providing increased opportunities for leisure and recreation. A supporting Supplementary Planning Document provides detailed policy guidance for the future development of Eastbourne Park. The types of infrastructure and initiatives required to deliver improvements to Eastbourne Park are identified in the Eastbourne Park SPD and include:

- A wetland visitor centre and educational resource centre which would require funding from an external partner or organisation;
- An Improved cycle and pedestrian network across Eastbourne Park;
- A continued commitment to the Eastbourne Park Flood Storage Scheme;
- Opening areas of open space for recreational use including sports pitches and children’s play space;
- An increased provision of allotment land;
- Landowners and tenants are encouraged to undertake environmental stewardship to deliver effective environmental management of land in Eastbourne Park. Grants are available for environmental improvements from DEFRA but landowners have to show they are proactive with agreed objectives.

9.90 The creation of a Green Network across the Borough consisting of a number of wildlife corridors would encourage the migration of species as a consequence of climate change. It would also help to link together the Borough’s 3 BOAs, the Borough’s Sites of Nature Conservation Interest (SNCIs) and the coastal strip.
Improvements to the green network will be sought through developer contributions, enhancing and maintaining six identified Green Network Corridors (GNCs):

1. Hampden Park North West Corridor;
2. Shinewater Park Corridor;
3. Langney North East Corridor;
4. Langney Sewer Corridor;
5. Crumbles Sewer Corridor; and
6. Horsey Sewer Corridor.

9.91 The six GNCs are mapped in the Eastbourne Park Supplementary Planning Document. Appendix C ‘Eastbourne Green Network Schedule’ describes in detail each individual GNC, providing information on the corridors, identifying areas of improvement needed, delivery methods and potential funding arrangements. The Appendix also provides information on the continued management of the Council’s 19 Sites of Nature Conservation Interest (SNCIs), along with safeguarding and improving the ecological importance of the Eastbourne Seafront Coastal Strip which stretches from Holywell in Meads to the local authority’s boundary at the edge of Sovereign Harbour. The Eastbourne Biodiversity Action Plan target is to maintain the total extent of coastal vegetated shingle habitat in Sussex with no net loss and to achieve favourable or recovering condition by appropriate management by 2015.

9.92 Improvements to biodiversity, which will assist in the enhancement of Eastbourne’s Green Network, will also be linked to other strategies including extensions to the cycle network and contributions made towards the Council’s flood storage scheme. Opportunities for biodiversity improvements on other sites across the Borough will be considered on a site by site basis. Specific opportunities to improve green infrastructure in the Town Centre will be addressed in the Town Centre Area Action Plan. The Council is planning to prepare a Green Infrastructure Plan in partnership with neighbouring authorities in East Sussex to coordinate and plan for the provision of cross-boundary and local green infrastructure.

9.93 The Council recognises the contribution that the provision of Sustainable Drainage Systems (SUDS) through new development make to green infrastructure. The implementation of SUDS through new development will help the Council to deliver Biodiversity Action Plan targets, including the maintenance of the extent and condition of reed beds and to continue creating new reed bed habitats from land of low nature conservation value.

F. Transport
9.94 Future economic and residential growth in the Borough must be sustainable; therefore it must be supported by an efficient, high quality public transport network. Transport infrastructure goes beyond simply providing extra capacity on the public transport network, it is also about improving accessibility for all residents of the Borough, including walking, cycling and the interchange between different transport modes, especially in areas of high growth and the sustainable centres identified in the Core Strategy.

9.95 The IDP has identified both strategic projects which provide additional capacity on the transport network which have cross-boundary impacts and local ‘connectivity’ projects which are needed to support the linkages between each of the Borough’s neighbourhoods and movement across the whole Borough. There are also other transport investments which are related to improving the quality or management of the transport network or encouraging modal shift, but are not critical to implementation of the Core Strategy policies and objectives, such as minor road and streetscape improvements.

9.96 The County Council has produced a third Local Transport Plan (the LTP) covering the period 2011 to 2026, which has the following specific transport objectives, which are also aspirations of the Eastbourne Core Strategy Local Plan and the IDP:

- Improve strategic and local connectivity of communities to facilitate economic and spatial growth and renewal through the Local Enterprise Partnership and Local Plan process;
- Reduce greenhouse gas emissions, local air pollution and noise from transport;
- Increase the resilience of transport infrastructure and services to the effects of climate change;
- Contribute to the protection and enhancement of the local natural and built environment;
- Improve road safety and vulnerable car users – pedestrians, cyclists, motorcyclists and horse riders;
- Reduce the number of people killed and seriously injured in road crashes;
- Improve access to jobs and services and leisure;
- Improve personal health and wellbeing by encouraging and enabling increased physical activity through active travel;
- Improve maintenance and efficient management of the transport network; and
- Reduce congestion by improving the efficiency of the transport network and encouraging greater use of sustainable modes of transport.

9.97 The Eastbourne and South Wealden area has been identified as a spatial priority area in the LTP. The key aims for Eastbourne and South Wealden area are to facilitate housing growth, create a more diverse and integrated economy, protect the local environment, enhance social provision and create sustainable communities. The focus for the area will be on the corridors of movement into and
within the area (whether by walking, cycling, public transport or car based transport) and corridors which link existing and future development locations to hubs of activity such as local, district and town centres, retail, hospitals, employment and leisure.

9.98 Analysis has been undertaken on the transport network implications of projected growth through a Transport Study for South Wealden and Eastbourne (SWETS Study) and this will be discussed in the relevant sections below; further detailed studies have also been undertaken – the Polegate Movement and Access Study which considers the strategic junction improvements required on the A22/A27 around Polegate and the Hailsham-Polegate-Eastbourne Movement and Access (Sustainable Transport) Corridor Study which considers the movement of all road users on the A22/A2270 corridor linking the three towns, and particular what improvements are required for public transport, cyclists and pedestrians. Both studies have a close inter-relationship as a couple of the PMAS junctions are also part of the Movement and Access corridor.

9.99 An ambition of the LTP is to ensure that sustainable links are provided from the proposed growth areas into the existing transport network and key destinations of travel. Eastbourne’s location at the eastern end of the South Downs National Park means that managing visitor access to the park and providing access by public transport and other sustainable means is of critical importance.

9.100 The transport section of the IDP is ordered to reflect the higher priority that should be afforded to sustainable modes of transport.

**F1 – Walking**

9.101 Walking is the most sustainable form of transport available to most of the community, leading to a need for a high standard of facilities and good urban design that encourage safe, sociable walking journeys. The County Council encourages physically active travel and its approach to walking and cycling is set out in the LTP. A key priority for the Council is to ensure that the needs of pedestrians are considered in all new development schemes and that the safety of the pedestrian is taken account of in any proposed transport interventions.

9.102 The focus for walking will be on the key routes and corridors of movement in the Borough, providing access to the town centre, schools, local shops and facilities, employment, health facilities, railway stations, open spaces, the seafront and other secondary centres. The Council has already been successful in delivering important walking initiatives, such as the signed ‘walking routes for health’ along the seafront promenade, but there are opportunities for more of these initiatives especially across Eastbourne Park.
9.103 The Borough’s network of urban footpaths plays an important role in connecting all of the Borough’s facilities and key locations. The following key priorities for walking include:

- The creation of new walkways, opening up Eastbourne Park to the wider community;
- Provide signalised pedestrian crossings in priority locations and where funding is available;
- Provide new footways where there is an identified need on safety grounds and funding is available;
- Improve disabled access by providing dropped kerbs and tactile paving at crossing points;
- Encourage high quality street design, giving high priority to the needs of pedestrians;
- Continue to promote safe walking to school as a healthy and social activity through School Travel Plans.

9.104 The Government will be publishing their draft National Walking and Cycling Investment Strategy for consultation in Spring 2016 with their final version coming out in Summer 2016. The County Council will be developing a countywide walking & cycling strategy supported by local action plans for geographic areas aligned to those in the LTP Implementation Plan – this would integrate and update where necessary the existing cycling strategies to also include walking that we have developed over the last few years; this includes the Eastbourne Cycle Strategy.

F2 – Cycling

9.105 There is significant need for an expanded cycle network in Eastbourne, linking the Borough to South Wealden and providing access to the wider National Cycle Network (NCN). This contributes to the principle of sustainable modes of travel and opens up the proposed Sustainable Centres of ‘Sovereign’ and the ‘Town Centre’, identified in the Council’s spatial development strategy, to the rest of the town. The County Council is responsible for the physical delivery of new cycle routes and these have been split into a number of phases. Eastbourne Borough Council is responsible for ensuring that cycling infrastructure is secured through the planning process, and for the delivery of off-road routes including those through existing parks and green spaces.

9.106 A Cycling Strategy for Eastbourne was adopted in 2012. The Cycling Strategy identifies a network of cycle routes (priority routes and secondary routes) across the town. This is fundamental to increasing the number of cycle trips made in the Borough and contributes towards the Council’s objectives to move to a low carbon town, reduce congestion, and to improve air quality, health and accessibility. The
transfer of journeys from cars to cycles will contribute to achieving the objectives of the LTP.

9.107 The Cycling Strategy identifies that the priority routes will be developed first. The priority routes are defined as those that will improve the existing key strategic cycle routes into and within Eastbourne, providing an enhanced network of dedicated or signed routes that allow cyclists to move between principal areas of housing, employment and leisure. Of these priority routes, the Horsey Cycle Route and the King Edwards Parade Cycle Route have been implemented first as well as a toucan crossing on Cross Levels Way utilising funding secured from the nearby Morrison’s supermarket development and now provides a safe crossing for the National Cycle Route 21 (NCR21) from Polegate to the seafront at the Sovereign Centre, along the A2280 to the west of the town.

9.108 The Government will be publishing their draft National Walking and Cycling Investment Strategy for consultation in Spring 2016 with their final version coming out in Summer 2016. The County Council will be developing a countywide walking & cycling strategy supported by local action plans for geographic areas aligned to those in the LTP Implementation Plan – this would integrate and update where necessary the existing cycling strategies to also include walking that we have developed over the last few years; this includes the Eastbourne Cycle Strategy.

Implemented Schemes

9.109 Implementation of the Horsey Cycle Route commenced in 2011 and will run between Langney Roundabout and Eastbourne Railway Station, utilising the alignment of the Horsey Sewer and providing a link between the Town Centre and Sovereign Harbour. Three phases have been completed to date; Phase 1a from Eastbourne Station to Cavendish Place is under construction (2015/16) whilst Phase 1b (Cavendish Place to Ringwood Road) is programmed for construction in 2016/17. Timescales for the implementation of Phase 3 (Langney roundabout to Lottbridge Road) are to be determined.

9.110 Improvements for cyclists from the town centre to the University area and seafront areas where implemented in 2014/15 using Local Sustainable Transport Fund monies. The proposed Terminus Road improvements will enable cyclists to utilise Terminus Road from Ashford Road through to Cornfield Road which is currently prohibited.

9.111 The King Edwards Parade Cycle Route was completed in 2013. The proposed route comprises a shared cycle/pedestrian route between Holywell Road and the Wish Tower and provides improved linkage between the Town Centre, the western area of the town and the foot slopes of South Downs National Park. Financial contributions from the development of Morrison’s supermarket at Hampden Park have assisted in providing a Toucan crossing at the junction of the Cross Levels
Way/Lottbridge Drove roundabout. This provides a safe crossing for the National Cycle Route 21 (NCR21) from Polegate to the seafront at the Sovereign Centre, along the A2280 to the west of the town.

Proposed Schemes

9.112 The Council in partnership with the County Council, through the Eastbourne Cycling Strategy has also been developing proposals for new cycle routes across the Borough. Funding from the Local Sustainable Transport Fund and other sources of funding will be used to assess the feasibility and assist in implementing future cycle routes in the Borough. Proposals for the following four routes have been developed for consultation in January 2014. The funding available has to be spent by the end of March 2015, by which time all of the schemes will have to be implemented.

- **Seafront route between Fisherman’s Green & Wish Tower**—cyclists travelling between Sovereign Harbour and Holywell Road currently have to use the B2103/B2106 seafront road which has no dedicated facilities for cyclists, is congested and has potential for conflict with cars reversing from diagonal parking spaces west of the pier and parallel parking spaces east of the pier. There is the potential to provide some of this route off-road on part of the promenade, subject to consultation. Construction is programmed for 2016/17.

- **Eastbourne Town Centre to Seafront**—cycling is currently prohibited in the pedestrianised area between Terminus Road and Seaside Road. Consideration needs to be given to identify a suitable route from the railway station in the town centre to the seafront. This would provide a valuable link to the new Horsey Cycle Route from its start point at Eastbourne Railway Station.

- **Eastbourne District General Hospital to Town Centre**—consideration needs to be given to identifying a suitable route from the main hospital (a principal employer in Eastbourne) towards the town centre.

- **Langney to Sovereign Harbour cycle route**—consideration needs to be given to linking Sovereign Harbour as a retail and employment area with the nearby Langney area.

- **Willingdon Drove cycle route**—consideration needs to be given to provide a cycle route along Willingdon Drove to link to the existing cycle facilities in Shinewater Park and along Cross Levels Way.

- **Hailsham-Polegate-Eastbourne Movement & Access (Sustainable Transport) Corridor Study cycle elements**—the development of walking
and cycling proposals for the A2270 corridor from linking Polegate/Willingdon with Eastbourne and tying into other proposed routes.

Secondary Cycle Routes

9.113 Other secondary Routes that generally link to the Priority Routes and provide locally signed or dedicated routes for cyclists to access places of education or work, have also been identified in the Cycling Strategy. No specific feasibility work has yet been carried out and therefore they should be considered as aspirational routes that will require further analysis before being included in a list of future schemes for feasibility and delivery as funding becomes available. Secondary routes could potentially provide opportunities for improved links across Eastbourne Park, making areas of open space more accessible, as identified in the Eastbourne Park Supplementary Planning Document.

9.114 There are a range of different sources of funding available to help deliver and implement the Cycling strategy initiatives.

- **Development Contributions**– Currently, the Borough Council and / or the County Council seek to agree financial contributions from development through Section 106 agreements towards local transport improvements to mitigate negative impacts on the transport network. This approach will, in the main, be superseded by CIL when it is introduced;

- **Government capital allocations**– for small transport improvements that help local economies and cut carbon emissions by reducing congestion, improving road safety and improving access to jobs and services on foot, by bike or by public transport;

- **Revenue Funding**– The County Council’s revenue budget supports road safety education work including the provision of ‘Bikeability’ training to schools and colleges;

- **Other Government Funding Steams** - Through the South East Local Enterprise Partnership, £8.6m of Local Growth Fund monies has been secured to deliver a walking and cycling package for the Eastbourne and South Wealden area. £0.6m has been spent in 2015/16 and £0.75m proposed in 2016/17 with the remainder to be spent from 2017/18 onwards. In addition, £2.1m of LGF monies has been allocated towards the Hailsham – Polegate – Eastbourne Movement and Access Corridor (Sustainable Transport) Corridor whilst £6m has been secured towards the Eastbourne Town Centre Movement and Access Package – elements of these funding packages could or are being used towards walking and cycling schemes.
9.115 The continued on-site delivery of cycle spaces/cycle racks as part of new developments will be critical in ensuring adequate facilities are provided for those who wish to travel by bicycle. An increase in cycle storage in key locations such as transport interchanges and community buildings such as leisure centres, shopping centres and other facilities will be influential in promoting cycling as an alternative to traveling by car. East Sussex County has provided planning guidance on cycling facilities and are a statutory consultee for major planning applications. The improvements to, or replacements of, existing cycling provision at the following locations are identified in the Cycling Strategy:

- **Town Centre**– adjacent to Arndale Centre entrances; Terminus Road towards seafront; Town Hall; Eastbourne library; railway station
- **Seafront**– in vicinity of Pier; at Sovereign Park; at Sovereign Centre
- **Theatre area**– adjacent to Congress Theatre and Towner Gallery
- **Sovereign Harbour** – dedicated cycle parking area
- **Parks and Gardens**– Princes Park, Gildredge Park, Shinewater Park, Helen Gardens
- **Retail areas** – Langney Shopping Centre; Admiral Retail Park
- **Education areas**– Sussex Downs College; University of Brighton; Eastbourne Park College; Eastbourne College.

**F3– Buses**

9.116 The County Council as the Local Transport Authority coordinates the bus network and its approach to bus services and bus service information is set out in the LTP. The LTP identifies four Quality Bus Corridors in the Borough radiating out from the town centre to serve key areas of the town and South Wealden:

- A259 Seaside (Eastbourne Town Centre to Sovereign Harbour);
- A2021/A2270 Kings Drive (Eastbourne Town Centre to the District General Hospital/Sussex Downs College and Hailsham/Polegate);
- A259 Seaside to Langney Shopping Centre;
- A259/A2270 Eastbourne to Old Town and Polegate/Hailsham including Eastbourne – Hailsham express bus service.

9.117 In partnership with Stagecoach (who run the Eastbourne bus service), the County Council continues to work on a range of initiatives to make bus travel more appealing and improve access to the Town Centre and key service destinations.
Although improvements to the bus network will be focused on the Quality Bus Corridors, improvements to the connectivity within the whole bus network of Eastbourne and South Wealden will be required. This will contribute to tackling climate change through reducing the number of car journeys and a subsequent increase in bus use. Feasibility design work and extensive assessment has been undertaken to identify movement and access improvements on the transport corridor between Hailsham, Polegate and Eastbourne. This includes proposals for improving bus journey times on the A2021/A2270.

9.118 The promotion of bus services will be achieved by providing relevant, high quality passenger transport information in advance and at the time of journey, such as Real Time Passenger Information (RTPI). Providing information on where passengers can travel to, the time it will take, the frequency of service and the cost contributes to improving accessibility to key services. This in turn promotes social inclusion, and tackles climate change through the reduction in car trips. The existing RTPI system in the town has been upgraded using Local Sustainable Transport Fund monies in 2014/15 and 2015/16 as part of the wider roll out of GPRS technology based for the county.

9.119 In order to improve transport infrastructure within the Town Centre, the Council are working jointly with East Sussex County Council and the bus companies to improve the pedestrian environment in Terminus Road. The scheme is expected to cost £6.25 million. East Sussex County Council has already committed £2.5 million to the project, the Council has allocated a further £450,000 and a further £3m is coming from the LGF monies allocated towards the Eastbourne Town Centre Movement and Access package. In addition the owners of the Arndale Centre are required to contribute £300,000 to the scheme as part of the proposed extension to the shopping centre. The proposed enhancements which were consulted upon in late 2013, include wider and improved pavements along Terminus Road with priority working for buses travelling eastbound; improvements around the Rail Station area up to the Grove Road roundabout; bus stops moved towards Bankers Corner, Cornfield Road and outside the Railway Station, and new street furniture and signage. The improvements around the Rail Station are currently under construction; the proposals for Terminus Road will commence in 2016/17 and be delivered alongside the proposed extension to the Arndale Centre.

**F4— Rail**

9.120 Network Rail owns and operates Britain’s rail infrastructure, maintaining and developing the country’s tracks, signalling systems, rail bridges, tunnels and level crossings.
9.121 Following Network Rail’s 2010 Route Utilisations Strategy, signalling improvements were funded and implemented by Network Rail in Control Period 4 (2009 - 2014) which have helped to improve line speeds on the East Coastway up to Bexhill.

9.122 The Sussex Route Study published in September 2015 reiterated the 2010 Sussex Route Utilisation Study recommendations regarding the reinstatement of the Willingdon Chord in that demand did not justify the additional service and construction costs of constructing the Chord. The Sussex Route Study also highlights that a timetabled interchange at Hampden Park could probably achieve a significant journey time improvement for much less cost.

9.123 East Sussex’s Rail Strategy adopted in November 2013 identifies two key priorities – high speed rail services to Bexhill, Hastings and Rye, and the improvement to the Uckfield line principally dual track and electrification from Hurst Green to Uckfield. Notwithstanding these priorities, the County Council continues to have a number of aspirations for improvements to the rail network and will continue to lobby for a new station in the Stone Cross/Polegate area.

**F5– Parking**

9.124 Parking is a key issue in urban areas such as Eastbourne. Controls on parking are aimed at addressing local parking problems but they can also help achieve a better flow of traffic especially for buses through the Town Centre and improve the general safety of shared vehicle and pedestrian areas. The introduction of civil parking enforcement in Eastbourne (2008), as in Hastings and Lewes, has resulted in less traffic circulating around the road network which helps to reduce CO₂ emissions. Any surplus revenue generated from the parking scheme will be reinvested in transport improvements within the Borough.

9.125 The Council commissioned consultants to undertake a Parking Strategy for the Borough, looking at the existing Parking scheme and controls in and around the Town Centre and seafront as well as parking controls and facilities across the rest of the Borough. The Eastbourne Parking Strategy was adopted in 2012.

9.126 The study analysed the projections for growth in Eastbourne and its wider catchment up to 2026 incorporating the plans for regeneration and redevelopment of the Town Centre through the Town Centre Local Plan. This concluded that the current supply of on and off-street parking is sufficient to meet the future demand for parking outside the peak season (up to 2027). The additional demand for parking can be accommodated by the existing car parking stock, rather than require an extensive supply of additional parking in the town centre. It is noted however, that any significant changes to the parking supply could have major ramifications on the attractiveness and therefore continued success of Eastbourne as a destination for retail, leisure and tourism. Further work was undertaken to examine the provision of parking facilities when demand is highest within the peak.
period of July-August. It is recommended that any additional parking to serve the Town Centre is provided elsewhere in the Borough, alongside improved access by public transport, walking and cycling, to reduce the overall demand for parking.

9.127 Different pricing mechanisms can be an important means of balancing demand between on street and off-street car parking. On-going work on the Parking Strategy and its recommended initiatives will be taken forward in subsequent reviews of the IDP.

9.128 New developments will need to provide the appropriate level of parking provision, and this is currently outlined in planning guidance from East Sussex County Council (2012). This guidance is used in the determination of planning applications. The Council is also investigating the potential for electric vehicle charging facilities at Hyde Gardens to provide viable alternatives to petrol and diesel car use.

**F6– Road Network**

9.129 The County Council is the Highways Authority for all adopted roads in the County other than the trunk roads which are the responsibility of Highways England. The County Council’s responsibilities include the maintenance, management and development of the highway network and decisions on road adoption, i.e. to take responsibility for its ongoing maintenance.

9.130 Key junctions and roads in the Borough, as with other areas of East Sussex, are at stress. This is because the strategic road network serving the county is not fit for purpose which thereby puts additional pressure on the county's local road network and the intensification of existing travel patterns over time. Consequently, these junctions and roads are likely to be sensitive to additional pressures arising from development. The specific impacts of new development on the transport network will be assessed on a site by site basis through the submission of Transport Assessments and other material presented in support of planning applications. There are however specific road network and junction improvements identified in the LTP.

9.131 Highways England is a non-departmental public body, sponsored by the Department for Transport, which operates, maintains and improves England’s motorways and major A roads. Just north of Eastbourne, Highways England maintain the A27 and the A259 east of the A27/A259 junction at Pevensey. Whilst there is no Highways England infrastructure within Eastbourne’s boundaries, it is important that cross boundary impacts of development are recognised as they will have a knock on effect on travel patterns into and out of Eastbourne. These cross boundary impacts have been taken account of in the preparation of the South Wealden and Eastbourne Transport Study (SWETS).
9.132 Within the adopted Wealden Local Plan, a high amount of new housing development is planned in the Willingdon/Polegate and Stone Cross/Westham areas of South Wealden which adjoin the northern boundary of the local authority. This coupled with new housing delivery in Eastbourne’s neighbourhoods will put added pressure on the network of roads leading in and out of the Borough and will create a number of stress points. The Council expects development contributions from future residential development to continue for necessary improvements to these roads and key junctions.

9.133 The key conclusions from the SWETS Study were as follows:

- In the base year (2009), 10-20% of junctions are stressed and average network speed is 24mph, which is acceptable for an urban area such as Eastbourne;
- Taking account of forecast additional trips generated through an increase in population, there is a slight deterioration in the overall network speeds and by 2027 average network speeds will drop to just below 16mph with about half of all key junctions on major roads showing stress;
- The testing shows that Eastbourne’s highway network responds in a consistent manner when factoring in projected housing and employment growth up to 2027;
- Regardless of any intervention packages, outstanding transport issues at 2027 include excessive traffic volumes on the Town Centre ring road and the competing (public/private transport) demands for available capacity on the identified Quality Bus Corridors.

9.134 The study confirms that no new roads are required within Eastbourne to cater for future population growth. However, there is a commitment from Eastbourne Borough Council and the County Council to safeguard one of the previously identified routes across Eastbourne Park, known as the St. Anthony’s link road.

9.135 Junction improvements will be required to maximise the capacity of the existing network as well as accommodate the needs of pedestrians, cyclists and public transport. In Eastbourne, junction improvements at Willingdon Drove/ A22, Lottbridge Drove/ Cross Levels Way, Cross Levels Way/ King’s Drive, and on corridors A259 Seaford – Eastbourne-Pevensy, and B2104 Ersham Road/ Friday St/Lion Hill/ Langney Rise have been identified. In South Wealden just outside the Borough boundary, the junctions of the A22 Jubilee Way, A27 and Dittons Road, the Cophall roundabout (A22 and A27), and the junction of the A22, A27 and A2270 have been identified for improvements. These improvements will be delivered using development contributions from Wealden and Local Growth Fund monies secured through the South East Local Enterprise Partnership. In addition, around £75m has been allocated in Highways England’s Roads Investment Strategy for smaller scale improvements to the A27 east of Lewes to address
congestion and safety issues along the route; some of this funding could also be used to address the capacity issues at the Cophall roundabout and A22/A27/A2270 signalised junction as well as the approaches onto and the link between these junctions.

9.136 The SWETS study also highlights the continued commitment required for Quality Bus Corridors along the A2270, A259 and A2021, along with providing adequate capacity and consistent design at key junctions along the A2270 corridor. A study commenced in 2012 to look at the whole bus route corridor between Hailsham and Eastbourne town centre. Consultation on the proposals for the movement and access corridor which will assist the movement of all road users is proposed for Autumn 2016.

9.137 In terms of road network and junction improvements within and outside the Borough, new development will be required to bear the full costs of necessary on-site and off-site works to a standard and design acceptable to the Highways Authority. This requirement includes:

- All relevant associated additional maintenance requirements (in the form of a commuted sum);
- Any necessary legal and inspection/audit fees;
- Design, land, materials and construction costs;
- Necessary contributions to upgrade the strategic network.

9.138 The LTP Implementation Plan 2011/12 – 2015/16 outlines the types of schemes identified to address local transport issues.

9.139 With further housing and employment potentially coming forward in the south Wealden area through Wealden’s Local Plan review, there will be a need to review the transport impact of this additional level of growth over and above what is already planned on the strategic and local network in the Eastbourne/South Wealden area and identify what enhanced or additional interventions are required.

G. Town Centre Infrastructure Improvements

9.140 The Eastbourne Town Centre Local Plan (TCLP) identifies a series of infrastructure improvements required to support the future growth and redevelopment of the Town Centre. The TCLP identifies 5 Key Development Opportunity Sites. These sites will be subject to comprehensive development proposals including enhancements to the public realm making them more attractive and functionally efficient as arrival points. These site specific improvements will be secured through planning obligations for each site when the planning application is determined.
9.141 There are a number of other infrastructure improvements required in the Town Centre that will not only benefit those who live in the Town Centre neighbourhood; they will significantly benefit all who live in the Borough and those who visit and use the Town Centre. These improvements include: the creation of gateways; an improved public transport interchange; public realm improvements; and the development of an arts trail and public art. The identified infrastructure improvements will be directly related to the impact of key new development and redevelopment sites within the Town Centre as well as future development across the Borough. The Borough Council intends to supplement financial contributions secured from the Development Opportunity Sites with CIL revenues collected from all development across the Borough.

G1. Gateways

9.142 It is essential that key approaches into the Town Centre are attractive and convenient for all of the community to use. There are four key approaches: Seaside and Marine Parade; Upperton Road; Upper Avenue/Cavendish Place; and King Edward’s Parade. The key approaches result in five key gateways into the town centre as follows:

- Junction of King Edward’s Parade and Wilmington Square adjoining the Wish Tower;
- Junction of Marine Parade, Queen’s Garden’s and Cavendish Place;
- Junction of Upperton Road and The Avenue;
- The Upper Avenue roundabout; and
- Eastbourne Station and the public transport interchange on Terminus Road.

9.143 The purposes of gateways are to create a welcoming first impression of the Town Centre through the design of public realm and the character of the built form. A landmark building or piece of public art may also help distinguish a gateway space within the wider structure of the town. Gateways will be high quality, well designed, attractive and usable areas of space, encouraging people to use the space, giving people clear signals about where to go next. The development of gateways will have a positive impact on all residents of the Borough and those who travel into the Town Centre to use its services and facilities.

G2. Public Transport Interchange

9.144 At present the experience for many people arriving into the town centre is either ambivalent or poor. Approaches and gateways, including the railway station, town centre car parks, and the bus stops on Terminus Road, are generally not well defined. It is vital to enhance this experience for users arriving by all modes of transport. There is a need to focus on the fact that all visitors will end up as
pedestrians walking around the Town Centre; therefore the quality of the experience for pedestrians is a key priority.

9.145 The railway station and the adjoining bus stops on Terminus Road provides a key gateway and public transport interchange point for the town centre and the town as a whole. It is well located and highly accessible to the primary retail core as well as secondary retail areas in the town centre.

9.146 However, it generally suffers from having a poor quality environment that can be congested at times, in terms of the number of buses arriving and leaving a relatively short section of road as well as the large number of passengers and other pedestrians using the public realm. Noise and air quality is also an issue in this part of Terminus Road.

9.147 There will be opportunities through planning obligations and the CIL process to collect contributions towards public transport interchange enhancements, which will serve the whole Borough and people who visit the town. The Public Transport Interchange requires significant enhancement to cater for the projected levels of population growth (directly associated with housing growth) within the Borough and the general increased level of use from people travelling to the town from outside the Borough. It is essential to improve the public transport interchange to provide an attractive and viable alternative to the private car, a key emphasis of sustainable development for the Local Plan.

9.148 Proposed improvements to Eastbourne’s public transport interchange which were consulted upon in late 2013 had the following aims:

- Improve public realm and connections with wider town
- Reallocate road space to pedestrians and public realm
- Reduce conflict of buses and pedestrians
- Improve relationship and connection with railway station
- Retain accessibility and visibility of buses on Terminus Road
- Coordinate the design of street furniture and signage which will be finished to a high standard befitting a key gateway into the Town Centre.
- Future proof design to aid a potential expansion of the shared space concept

9.149 The proposals includes the following elements:

- Widening and resurfacing footways on Terminus Road and introducing narrowed resurfaced carriageways to facilitate easy crossing
- Removal of kerbs to aid access and to reduce vehicle speeds through Terminus Road
- Improving and simplifying the crossing facilities at the Gildredge Road /Terminus Road / Ashford Road junction
• Providing a new pedestrian crossing outside the station across Terminus Road
• Allow cyclists access to the improved section of Terminus Road.
• Re-positioning the bus stops from Terminus Road towards Bankers Corner and into Cornfield Road
• Providing new bus stops outside and opposite the Railway station in Terminus Road
• Installing new street furniture (seating, lighting, cycle stands, benches etc.) and signage
• Removing unnecessary signs and barriers.

9.150 The first phase of works outside the Rail Station commenced in 2015/16 and the construction of the Terminus Road improvements is programmed to start in 2016/17 and will complement the planned extension to the Arndale Centre.

G3. Public Realm Improvements

9.151 Eastbourne’s Town Centre suffers from having a limited number of public spaces. It is vital to ensure that public realm is as attractive and well used as possible; reinforcing the role, function and legibility of the town centre as a whole. The Town Centre Local Plan identifies that there are a number of key locations within the town centre where enhancements to and investment in the public realm should be prioritised. These are highlighted in Figure 11 below:

Figure 11 – Key Public Realm Improvements

<table>
<thead>
<tr>
<th>Major Road</th>
<th>Key Public Realm Improvements Required</th>
</tr>
</thead>
</table>
| Terminus Road corridor      | • Improve quality and appearance of Bus interchange along Terminus Road through the Terminus Road Improvement Scheme  
|                             | • Establishing a new public square between the junctions with Bolton Road and Langney Road;             
|                             | • More direct and attractive pedestrian crossing facilities are required at the junctions of Pevensey Road and Lismore Road, and Seaside Road and Trinity Trees, to enhance access to the Seafront; 
|                             | • Enhance access between Terminus Road and the Seafront through the removal of pedestrian guardrails and the creation of additional pedestrian crossing facilities over Grand Parade.  |
| Grove Road and South Street | • The design of the public realm and the coordination of street furniture will establish a stronger identity for this area enhancing the pedestrian environment;  
<p>|                             | • Particular emphasis will be placed on the junction points with Grove Road and Terminus Road and South Street and Gildredge Road to simplify junction arrangements and provide more convenient pedestrian crossing facilities.  |
| Seaside Road                | • Extend the provision of pieces of public realm to the junction with Terminus Road and Trinity Trees, reducing carriageway width and establishing a more connected seamless ‘place’ as opposed to a traffic junction;  |</p>
<table>
<thead>
<tr>
<th>Major Road</th>
<th>Key Public Realm Improvements Required</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Creating new bus stop facilities to provide connections to the Seafront via the eastern end of Terminus;</td>
</tr>
<tr>
<td>Susans Road</td>
<td>• The road would benefit from a coordinated design approach to the public realm to raise the profile of the street and establish a more attractive environment for residents and visitors.</td>
</tr>
<tr>
<td>Pevensey Road and Lismore Road</td>
<td>• It is important to ensure that there is a balance between pedestrian and vehicular movement through enhancements to the public realm including crossing points and wider pavements.</td>
</tr>
<tr>
<td>Gildredge Road</td>
<td>• There are currently limited opportunities for crossing particularly between Little Chelsea and the Mark Lane area;</td>
</tr>
<tr>
<td></td>
<td>• Several attractive period buildings give the road a grand character that would be enhanced particularly through tree planting where practicable and achievable having regards to underground servicing and pavement width.</td>
</tr>
<tr>
<td>Cornfield Terrace and Cornfield Road</td>
<td>• There is an opportunity to site a piece of public art at the end of Cornfield Terrace outside the Devonshire Theatre to provide a visual marker drawing visitors down from the Memorial Roundabout.</td>
</tr>
<tr>
<td>Hyde Gardens</td>
<td>• Should there be an opportunity to rationalise some of the on-street car parking then space could be improved to provide an enhanced area of open space within the town centre with seating, landscape planting and additional street trees where practicable and achievable having regard to underground servicing and pavement width.</td>
</tr>
<tr>
<td>Memorial Roundabout</td>
<td>• A relatively simple scheme of coordinated paving, de-cluttering of street furniture and provision of more direct crossings particularly Lismore Road and Cornfield Terrace would contribute significantly to the qualities of the space.</td>
</tr>
<tr>
<td>Wilmington Square</td>
<td>• Enhancements will focus on enhancing the environmental quality of the area and creating an improved setting for the Wish Tower (listed building) and The Towner Art Gallery in a key gateway location;</td>
</tr>
</tbody>
</table>

9.152 The Key Development Opportunity Sites identified in the TCLP will provide the ability to secure specific public realm improvements within the Town Centre, including new streets and open spaces. A combination of the on-site delivery of public realm improvements, site-specific developer contributions secured through planning obligations, and contributions secured through the Community Infrastructure Levy from all developments across the Borough will help to deliver the Key Public Realm Improvements identified in Figure 11 above.

**G4. Arts Trail and Public Art**

9.153 In addition to the established Towner Art Gallery which has received critical acclaim, there are a number of small independent gallery spaces and crafts people represented within the Town Centre. Through establishing connectivity via an Arts Trail that links the main retail core and railway station to the Arts Quarter around Devonshire Park and onward to the Seafront the profile of the arts community can
be raised. It will also contribute towards enhancing the legibility and accessibility of the town centre.

9.154 Key areas for improvement are the linkages between the railway station and the Seafront along Grove Road, South Street, Wilmington Square and Cornfield Terrace. This will be part of the wider network of routes across the town centre to generate a public realm that encourages people to walk and enjoy the built environment, cultural heritage and visitor offer in a way that is safe, clearly understood and signposted through use of lighting, materials, street furniture and signage.

9.155 The introduction of public art into the public realm can contribute towards giving Eastbourne additional character and identity as well as providing local landmarks to improve legibility. The provision of public art will be required on specific gateway locations and public spaces within the Town Centre, as well as the seafront. They can be secured by the on-site delivery of public art on Key Development Opportunity Sites, and through the Community Infrastructure Levy process with financial contributions being collected from all developments across the Borough.

H. Emergency Services

H1 - Police

9.156 Sussex Police have assessed the proposed developments with the Eastbourne area and their associated population growth. A baseline assessment was undertaken across East Sussex to identify the current costs of providing an appropriate level of policing and community safety across Eastbourne. Based on the development planned within Eastbourne and the anticipated population increase, it has been identified that the total cost of policing the growth equates to £435.32 per dwelling, a total infrastructure funding need of £2.186 million over the Plan period. An Eastbourne Policing Plan has been produced by Sussex Police, showing indicative projects and costs. Infrastructure needs and types may change over the Plan period when development comes forward and the full impact on policing is known.

</tr>
</tbody>
</table>

9.157 The Home Office provide Sussex Police with general capital grants, which only fund a proportion of the annual capital programme. The currently approved capital programme plans to draw on capital receipts in excess of £9 million to help fund a capital programme if £28 million, which is to maintain and improve existing service levels. The capital programme does not allow for the cost of providing new facilities as a result of development growth, it only looks at maintaining its current operational capability.
H2 - Fire & Rescue Service

9.158 The East Sussex Fire & Rescue Service has confirmed that the levels of proposed housing and employment growth will not adversely affect the service or require the need for any additional facilities or strategic infrastructure. The recently published ‘Short Term, Medium Term and Long Term Need Matrix’ (September 2010) highlights that in the short term (Up to 2012) there is no indication of the need to relocate or upgrade Eastbourne Fire Station. However, the Council will work closely with Wealden District Council to ensure that the level of new development proposed to the north of the Borough in South Wealden will not have a negative impact on the coverage of the Eastbourne Fire Service.

9.159 In the next 5 years (up to 2018) consideration will be given to the implementation of sprinklers in new larger residential developments (5+ units) furthest away from the Fire Station, which will be invaluable in the saving of lives in the incidence of a fire. A re-evaluation of the implications of housing growth within the Sovereign neighbourhood will be undertaken to ensure the ability to deal with fire emergencies in this neighbourhood is not compromised. In the long-term (2018 and later) a further assessment will be made by the Fire and Rescue Service to ensure the appropriate coverage of fire stations across Eastbourne and South Wealden. This will redress the implications of the level of housing growth, and review the stations equipment and possible need for upgrading.

H3 - Ambulance Service

9.160 The South East Coast Ambulance Service NHS Trust is a patient-focused organisation providing emergency, unscheduled urgent and non-emergency care to the Boroughs’ residents. They respond to 999 calls from the public, urgent calls from healthcare professionals and in Sussex provide non-emergency patient transport services (pre-booked patient journeys to and from healthcare facilities).

9.161 In the short-term it is unlikely that capital funding will be available within the public sector for specific infrastructure improvements in the Borough, and there is a considerable drive to reduce costs and improve efficiency. The Ambulance Service will continue to ensure that capital schemes demonstrate value for money and are viable in their own right. In addition they will continue to explore and seize opportunities for internally generated funds wherever possible.

I. Affordable Housing

9.162 The Council has identified there is a strategic need to increase the provision of affordable housing across the Borough in order to cater for increased local need and demand. The Core Strategy has significantly revised the affordable housing policy removing a policy threshold so that all developments that include the net
increase in dwellings will be required to make some contribution towards the provision of affordable housing be it an affordable housing unit or a commuted sum payment. Affordable housing will not be discussed in detail in the IDP as it is covered by a separate standalone policy in the Core Strategy, and is currently expected to be secured through Section 106 agreements in line with the Core Strategy Policy.

10 Cross-Boundary Infrastructure Issues

10.1 Improvements to transport infrastructure are considered at a wider level than administrative boundaries, and take account of complex patterns of movement and levels of usage. Although no new roads are required within Eastbourne to deliver the spatial development strategy, the Borough Council intends to use CIL revenues to supplement County Council funding for improvements to roads and key junctions outside or on the Eastbourne boundary which are required to support growth. In addition, where such improvements are required to enable individual development proposals to go ahead, the Borough Council and/or the County Council will seek to secure the necessary works and/or funding through Section 106 agreements.

10.2 Improvements to the trunk road network north of the Borough in the southern part of Wealden District will be required to support development proposed by the Wealden Core Strategy as well as growth in Eastbourne. As the Highways Agency does not expect to receive any funding for the necessary improvements, Eastbourne Borough Council and Wealden District Council intend to use CIL revenues to supplement the contributions currently agreed from developments currently permitted in the southern part of Wealden District.

10.3 The extension of Eastbourne’s Wastewater Treatment Works is potentially required to meet growth in both Eastbourne and South Wealden. The Council is working closely with Southern Water and Wealden District Council to ensure the appropriate capacity of the Wastewater Treatment Works is provided, and that further alternative solutions are provided in South Wealden for further residential growth outside of Eastbourne’s boundary.

10.4 Other cross-boundary infrastructure issues include the provision of new facilities at Langney Shopping Centre, which would serve the catchment of new development in South Wealden, particularly around Stone Cross, Westham and Pevensey. In addition any extension of Willingdon Secondary School later on in the planning period could provide an alternative means of addressing some of the forecast shortfall in secondary school places in the Eastbourne-Willingdon/Polegate area.

10.5 The effective delivery of a Green Network for Eastbourne will also involve cross-boundary action, to ensure that the identified Green Network Corridors link with
the adjoining green spaces and green networks in Wealden District Council’s jurisdiction.

11 Resource Implications and Actions

Resource Implications

11.1 The Council recognises the importance of the Infrastructure Delivery Plan and its role in supporting the delivery of the Community Infrastructure Levy (CIL) Charging Schedule. The IDP provides vital information on infrastructure funding and identifies when and how infrastructure will be delivered. Identifying funding streams helps the Council to build up a bigger picture of the funding gaps that will need to be met by CIL. The CIL Charging Schedule will be progressed in 2013 and will take account of all the resources needed to prepare and implement a charging schedule.

11.2 A county-wide CIL working group was arranged including representatives from East Sussex County Council and all the local planning authorities in East Sussex, with initial discussions taking place in August 2011. The purpose of the meetings was to work jointly on a strategy to implement CIL across all local authorities, pooling resources and evidence where possible to provide economies of scale and synergies between each local authority’s CIL approach. All local authorities in East Sussex as well as Brighton & Hove jointly commissioned a viability assessment in preparation for the implementation of separate CIL Charging Schedules for each local authority in the area.

11.3 There are direct resource implications in the implementation and monitoring of CIL. The Council will introduce clear and transparent processes for deciding priorities and managing CIL revenue so that local communities can see how, when and why money is being spent across the Borough. This process is resource intensive and the Council will be proactive in planning for this process in the future.

Actions

11.4 The IDP has highlighted several actions that will need to be undertaken during the plan period, many in the short term, as a consequence of the identified infrastructure requirements to support future growth. Although short term solutions may have been identified, the Council will need to work closely with infrastructure providers and its statutory stakeholders to ensure that infrastructure keeps pace with development. The following actions have been identified as important requirements:
- Strategic requirement to review and update the operation and maintenance of the Willingdon Levels Flood Storage Scheme through the Surface Water Management Plan;
- The implementation of Eastbourne’s Cycling Strategy, ensuring that new cycle routes are provided across the Borough;
- The implementation of the recommendation within the Borough-wide Parking Strategy;
- The implementation of the Council’s ‘Natural Environment Strategy’ to prioritise the provision of renewable energy technologies and safeguard the Borough’s environmental quality.

12 Infrastructure Delivery Schedule

12.1 The Infrastructure Delivery Schedule (attached as Appendix A) provides a detailed description of the critical strategic types of infrastructure that are required to deliver the Core Strategy Local Plan.

12.2 The following notations are presented in the Infrastructure Delivery Schedule to aid understanding:

**Importance to Strategy**

- **Critical:** The infrastructure proposed is critical to the delivery of planned development as well as the overall spatial strategy objectives and should be identified as a priority at the appropriate stage in relation to implementation of the Local Plan. There is currently no capacity in the existing infrastructure provision and no dependent development can take place without the infrastructure.

- **Important:** The infrastructure proposed is required to support the planned development as well as overall spatial strategy objectives but does not need to be prioritised. There is some/limited capacity in existing infrastructure provision but improvements will be needed. Also related to this is timing of the infrastructure e.g. the infrastructure would be required later in the plan period.

- **Desirable:** The infrastructure proposed does not support significant development taking place but will facilitate the delivery of the overall spatial strategy objectives. These are important items to support sustainable growth but allocating funding for their delivery may have to wait until all critical and important infrastructure has been delivered.

**Risk to Delivery**
The risk that the infrastructure will not be delivered, not the wider risk to plan if infrastructure doesn’t happen and development associated with it doesn’t take place. This is categorised as follows:

- **High** – Fundamental constraints attached to the delivery of the scheme e.g. no clear funding stream, no site identified, land/site assembly issues.

- **Medium** – Some constraints attached to the delivery of the scheme.

- **Low** – Strong certainty of delivery – costs identified, funding in place, political and community support.

Outputs/schemes may move up or down the lists. It is for Eastbourne Borough Council to review priorities as necessary.

**Notes**

**No allocated cost #** - There is no allocated cost for the project at the present time. The Council will continue close joint working with the infrastructure provider to ensure the timely provision of infrastructure in the period identified. Any new information will be provided in an update to the IDP when it is required.

Appendix B - List of Infrastructure Providers

The Council sent out an Infrastructure questionnaire in March 2010 to several infrastructure providers operating across the Borough in order to collect information on standards of provision and infrastructure requirements up to the end of the Council’s Core Strategy planning period (2027). These infrastructure providers were:

- British Telecom
- East Sussex County Council
- East Sussex Downs & Weald Primary Care Trust
- Eastbourne Fire & Rescue Service
- Eastbourne Homes
- EDF Energy Networks
- Environment Agency
- Highways Agency
- Network Rail
- Skills Funding Agency
- South Coast Ambulance Service
- South Downs National Park Authority
- South East Water
- Southern Gas Networks
- Southern Water
- Stagecoach
- Sussex Downs College
- Sussex Police
Appendix C - Eastbourne Green Network

Information Sources:

- Allotment Provision Review (2009)
- Biodiversity Assessment (2007)
- Landscape Character Assessment (2010)
Appendix B: EASTBOURNE GREEN NETWORK

Green Network Corridors
1. Hampden Park North-west corridor
2. Shinewater Park corridor
3. Langney North East corridor
4. Langney Sewer corridor
5. Crumbles Sewer corridor
6. Horsey Sewer corridor

Key
- Downland
- Beach
- Sport
- Natural Area
- Cemetery
- Park/Garden
- Allotment
- Play area
- Amenity area
- Site of Natural Conservation Importance
- Eastbourne Park boundary
- Eastbourne built-up area boundary
- Eastbourne Borough boundary
- Green Network Corridor

<tr>
<td>1. Hampden Park North West Green Network Corridor (GNC)</td>
<td>Delivery of a woodland dominated corridor linking Eastbourne Park with the downs via Hampden Park and Ham Shaw SNCI</td>
<td>Secondary river through the corridor connecting Eastbourne Park through Hampden Park with the wider south downs.</td>
<td><strong>Objectives and Policy</strong> Core Strategy Spatial Objective 7 <strong>Evidence</strong> Eastbourne Biodiversity Assessment</td>
<td>Section 106, with both on-site and off-site delivery explored</td>
<td>Enhance ability of the environment to cope with flooding and CO₂ emissions Create better public access Sustain wildlife in the long term and allow for adaptation to climate change</td>
<td>Seaford to Eastbourne Downs. Opportunities include restoration &amp; creation of reed beds, enhancement of spring fed meadows, fen and grazing marsh.</td>
<td>Infrastructure improvements to Eastbourne Park could offer potential revenue for improvements elsewhere in the green network. Specific actions need to be defined as part of a vision for the corridor Outreach work with schools and/or community groups could minimise delivery costs through encouraging voluntary engagement</td>
</tr>
<tr>
<td>2. Shinewater Park GNC</td>
<td>Delivery of a wetland/open water dominated corridor linking Eastbourne Park directly with the adjacent Levels of the Willingdon Trees neighbourhood</td>
<td>Willingdon and West Langney Sewer and Levels are an important feature of this green corridor.</td>
<td><strong>Objectives and Policy</strong> Core Strategy Spatial Objective 7 <strong>Evidence</strong> Eastbourne Biodiversity Assessment</td>
<td>Section 106, with both on-site and off-site delivery explored</td>
<td>Enhance ability of the environment to cope with flooding and CO₂ emissions Create better public access Sustain wildlife in the long term and allow for adaptation to climate change</td>
<td>Eastbourne Marshes. Links via corridor 2 to the Wealden strategic gap between Stone Cross &amp; Polegate and links the marshes to the sea by corridor 5. Opportunities include wetland and coastal habitat management, restoration and creation.</td>
<td>Infrastructure improvements to Eastbourne Park could offer potential revenue for improvements elsewhere in the green network. Specific actions need to be defined as part of a vision for the corridor Possibility to use agri-environment schemes Outreach work with schools and/or community groups could minimise delivery costs through encouraging voluntary engagement</td>
</tr>
<tr>
<td>3. Langney North East GNC</td>
<td>Delivery of a grassland/woodland dominated corridor linking Eastbourne Park with adjacent countryside near Stone Cross via Langney Centre</td>
<td>No watercourses present however this corridor connects Eastbourne Park with the Pevensey Levels SSSI.</td>
<td><strong>Objectives and Policy</strong> Core Strategy Spatial Objective 7 <strong>Evidence</strong> Eastbourne Biodiversity Assessment</td>
<td>Section 106, with both on-site and off-site delivery explored</td>
<td>Enhance ability of the environment to cope with flooding and CO₂ emissions Create better public access Sustain wildlife in the long term and allow for</td>
<td>Pevensey Levels – corridors 3 &amp; 4 link the Eastbourne Marshes and Pevensey Levels BOAs. Opportunities include ditch restoration</td>
<td>Infrastructure improvements to Eastbourne Park could offer potential revenue for improvements elsewhere in the green network Specific actions need to be defined as part of a vision for the corridor Outreach work with schools</td>
