to me

Dear Mr Chris Banks

My apologies for listing three different projects but they do dovetail. It would appear none of these projects underwent Environmental Impact Assessment prior to commencing work, or if one was carried out results have not been revealed.

In view of current views that many wildlife creatures are declining, and therefore all should be done to protect the habitats of a variety of insects, lizards, butterflies, snakes and birds.

It is exceedingly damaging that great swathes of land including a large beach are to be used for commercial gain. Yet, more importantly, it will also increase the very heavy diesel traffic in such a small area, within a small town, with Brett Aggregates and the addition of a Medical Incinerator thereby creating more lorries to arrive and depart.

On this premise it is essential Environmental Impact Assessment is carried out regarding the toxic air quality we are all inhaling, with particular regard to the nearby schools predominately absorbing diesel driven fumes.

It is imperative the Tide Mills is protected both for local residents and visitors can continue to enjoy this peaceful area without the impact of noise, dirt from diesel lorries toing and froing.

We, the residents voted for Councillors. They like us are guardians of these areas and should protect the territory from such hazards. Councillors should stop by passing environmental issues and reach a compromise, which ultimately would improve public health, thereby reducing costs within the National Health Service.

Yours sincerely

Eve & David Taylor
